INTRODUCTION

INSTRUCTION MANUAL FOR USING THE 3-D SURFACE PROFILE AND GRIND AND FILL SOFTWARE

The 3-D Surface Profile and Grind and Fill Software consists of three standalone programs. The first is the PF9 VNET data file reader. This program will read the PF9 data file generated from a TMV generated project or network level data collection. From this file, the inertial reference profile, gyroscope sensor, scanning laser transverse profile, or rut displacement data is broken out and separate files generated that are suitable for the 3-D graphics and grind and fill programs. The second program, Data Transform program takes the *.bin file from the PF99 Reader and transforms it into data files that can be used with the Grind and Fill program. It additionally provides a 3-D surface profile display which reads selected sensor data and provides a 3-D display of this data. The user may select various display options such as viewing angle or rotation. The user may also select or deselect specific sensors and reprocess the display. The third program provides cut and fill quantities and the resulting images after passing a plane over, under, or through the 3-D surface profile image. The user specifies the plane's longitudinal starting point, angle of entry, and height. For each selection, the resulting volume computations are provided for the fill or cut quantities. Additionally the program will plot the resulting 3-D surface profile for the cut or fill areas. This package will allow the user to model and view various overlay, cut or fill strategies. The relationships between the three programs are illustrated in the figure below.

Flow of Data between the three programs

THE PF99 READER

The PF99 Reader program will read a PF99 Format data file and extract a section of the various sensor data to be processed.

	ler		_ 🗆 X

Gyroscope Data				Х	Х	Х	Х	Х

Combinations available from loaded data

Each of these combinations produces an additional file, which has yet another extension added to describe the contents of the file. If the data type is in the file, the appropriate letter is assigned; otherwise, the character '0' is put in as a placeholder.

Defining the extension of the transformed files

- If Scanning Laser data is present, the **Transverse Profile** combination button will activate. This option will read the information from the status box and the stored data to create a *.0T00 file. The *.0T00 file can be used to graph the surface in three dimensions.
- If Profile data is present, the **Profile** combination button will activate. This option will read the information from the status box and the stored data to create a *.00P0 file. The *.00P0 file can be used to graph the profile in three dimensions.
- If Acoustic Rut data is present, the Acoustic Rut combination button will activate. This option will read the information from the status box and the stored data to create a *.000R file. The *.000R file can be used to graph the acoustic rut in three dimensions
- If Gyroscope data and Transverse Profile data are available, the **Rotated Transverse Profile** combination button will activate. This option will read the information from the status box and the stored data to create at *.GT00 file. The *.GT00 file can be used to graph the rotated transverse profile in three dimensions.
- If Gyroscope data and Profile data are available, the **Rotated Profile** combination button will activate. This option will read the information from the status box and the stored data to create a *.GOP0 File. The *.GOP0 file can be used to graph the rotated profile in three dimensions.
- If Gyroscope data and Acoustic Rut data are available, the **Rotated Acoustic** button will activate. This option will read the information from the status box and the stored data to created a *.GOOR file. The *.GOOR file can be used to graph the rotated acoustic rut in three dimensions

- If Gyroscope data and Transverse Profile data and Profile Data are all available, then the **Transverse Data Match** combination button will activate. This option will create a *.GTP0 File. The GTP0 File can be used to graph the combination of the profile and the transverse laser rotated to the same angle. This Transverse Data Match file is also one of the valid inputs for the Grind and Fill program.
- If Gyroscope data and Acoustic Rut data and Profile data are all available, then the **Acoustic Data Match** combination button will activate. This option will crate a *.GOPR file. The *.GOPR file can be used to graph the combination of the profile and the acoustic rut rotated to the same angle. This Acoustic Data Match file is also one of the valid inputs for the Grind and Fill program.

The other section of the Data Transform program is the graphical control box. These buttons control the display of graphs of data generated by the combination boxes. These are always active, and can display previously generated files.

🛃 Graph 💶 🗖 🗙
Color Minimum
Color Maximum Inf
Azimuth 30.0
Elevation 60.0
OK Cancel

The first button is the **Settings** button, which opens a Graph Options dialog box for use with the Matlab display engine. The colors visible on the graph go from some minimum in the elevation plane to some maximum in the elevation plane. The defaults are '-inf' for negative infinity and 'inf' for positive infinity. The next two co-ordinates are the rotation of the plane of the graph, and the height of the view above the graph.

GRIND AND FILL

The Grind and Fill tool takes the differences between a surface and a plane in order to determine how much volume must be changed across the surfaces by grinding down a pavement or filling in a depression. The first surface is a target surfaces generated by the Data Transform Tool, which contains a transverse data reading or an acoustic data reading that has been rotated and matched to the profile. The second surface is a user defined plane that is at a given angle.

_ 🗆 🗙 🣣 GuiGrindAndFill Surface File Browse Plane Control-Transverse inches 0.0 Grind & Fill inches Distance 0.0 Elevation inches 0.0 Length inches 6336 Quit inches Width 96 degrees Angle 0.0

Loading the Surface

When the tool begins, the first step is to load the Data Match file from the Data Transform tool into the Grind and Fill. The Browse button needs to be selected.

Files of type:	All Files (*.*)		•	Cancel

Now, the surface selection dialog box opens. Either a *.GTP0 or a *.GOPR file will need to be selected. A Transverse Profile Data Match file is marked *.GTP0, and an Acoustic Rut Data Match file is marked *.G0PR.

Defining a Desired Surface as a Plane

	test.1111.pf9.l	bin.GTP0	Browse
Plane			Control
Transverse	-80	inches	Grind & Fill
Distance	0	inches	Show Grind
Elevation	0	inches	Show Fill
Longth		inches	Show Surfaces
Length	6336	inches	
Width	160	inches	Quit

Now that the file has been selected, the Plane definition panel must be filled in with the correct coordinates. The first three fields, Transverse, Distance, and Elevation, describe the starting location of the plane.

Defining the axes in 3-Dimensions

Gu	iGrindAndFill			
- Surfa	ice File			
		test.1111.pf9.b	in.GTP0	Browse
	– Plane –			Control
	Transverse	-80	inches	Grind & Fill
	Distance	0	inches	Show Grind
	Elevation	0	inches	Show Fill
	Length	6336	inches	Show Surfaces
	Width	160	inches	Quit
	Angle	15	degrees	

The plane then has some length in the distance direction, and some width in the transverse direction.

🛃 GuiGrindAndFill			_ 🗆 ×
Surface File			
	test.1111.pf9.t	oin.GTP0	Browse
- Plane			Control
Transverse	-80	inches	Grind & Fill
Distance	0	inches	Show Grind
Elevation	0	inches	Show Fill
Length	6336	inches	Show Surfaces
Width	160	inches	Quit
Angle	15	degrees	

Finally, the plane is set at some angle with respect to the transverse direction.

Calculating Grind and Fill

Once the plane has been defined, the Grind and Fill button can be selected. At this time, a "waitbar" will appear on the screen to show the user the system is still processing. At the end of the calculations, a Grind and Fill complete box will appear.

*	_	
	Writing Report	
	→ ×	
	Grind and Fill complete	
	OK	

Once the Grind and Fill calculation is complete, the remaining buttons on the main dialog box will become active and a report of the data will be displayed.

Total volume of the surface: 151006.43 cubic inches Total volume of the plane: 527494.88 cubic inches Total difference of the volumes: -376488.45 cubic inches Total Volume to Grind: 121423.89 cubic inches Total Volume to Fill: 497912.34 cubic inches Total Volume Difference: 376488.45 cubic inches Three graphs are now also available to be shown to the user. The Grind map, the Fill map, and the representation of the two surfaces, the plane and the Data Match surface.

The Grind Map shows where the surface would have to be ground down to be the same surface as the desired plane.

The Fill Map shows the amount of material that needs to be added in order to bring the surface up to the desired Plane.

The final image is the comparison of the surface and the plane. In this case, the desired Plane displays in a transparent gray.

Installing the Matlab Runtime Component

Matlab provides a library for its internal routines to be used in deployment of software that comes with the Matlab Compiler Toolbox.

Make a directory on your hard disk, and copy the MCRInstaller.exe program to that directory. Next, execute the installer and the following command window will appear.

A few seconds after this window opens, the installation program will begin. The Windows Installer screen below opens up as the system gets ready to install.

Windov	ws Installer	
i de la companya de l	Preparing to install	Cancel

Next, the following splash screen will appear, and prompt the user to click next to install the Runtime Component. Click next to continue.

🛃 MATLAB Component Runtime	_ 🗆 ×
