Product 5-2110-03-P2 Project Number 5-2110-03 Project Title: Internet-Based Utility Data Submissions and a GIS Inventory of Utilities

> Performed in cooperation with the Texas Department of Transportation and the Federal Highway Administration

> > October 2008

TEXAS TRANSPORTATION INSTITUTE The Texas A&M University System College Station, Texas 77843-3135

# **INTRODUCTION**

The Texas Department of Transportation (TxDOT) issues thousands of approvals every year that enable new utility installations to occupy the state right-of-way (ROW). The utility installation review process currently in place is manual, tedious, and lengthy. To address this situation, TxDOT funded the development and implementation of an Internet-based system that automates the submission, review, approval, construction inspection, and archival of notices of proposed utility installation at TxDOT. This Internet-based utility permit implementation is called the Utility Installation Review (UIR) System.

This package includes a collection of materials for training users of the UIR system, including TxDOT users and utility company users. The training materials include presentations in Microsoft® PowerPoint® format, as well as presenter notes and participant handouts, both in portable document format (PDF) and printout format.

# INSTRUCTIONAL MATERIALS AND CD CONTENTS

- File UIR Instructions.doc: This document (Word format)
- Short Presentation
  - File UIR Short Presentation.ppt: Presentation (10 slides PowerPoint format)
  - File UIR Short Presentation Notes.pdf: Presenter notes (10 pages PDF)
  - File UIR Short Presentation Handout.pdf: Participant handout (4 pages PDF)
- Medium Presentation
  - File UIR Medium Presentation.ppt: Presentation (16 slides PowerPoint format)
  - File UIR Medium Presentation Notes.pdf: Presenter notes (16 pages PDF)
  - File UIR Medium Presentation Handout.pdf: Participant handout (6 pages PDF)
- Long Presentation
  - o File UIR Long Presentation.ppt: Presentation (277 slides PowerPoint format)
  - File UIR Long Presentation Notes.pdf: Presenter notes (277 pages PDF)
  - File UIR Long Presentation Handout.pdf: Participant handouts (93 pages PDF)

# **INSTRUCTIONS**

#### SHORT PRESENTATION

The presenter could use the short presentation as an introduction for a training session of users who are about to begin using UIR. These users could be TxDOT users or utility company users. The presentation provides participants with a short background about the development and structure of UIR, followed by a live demonstration of the system. This format requires access to the Internet and a web browser in order to run the UIR system. The presenter has considerable freedom to present as many UIR components and screens as dictated by the purpose of the

training session and/or the audience. The following is a suggested sequence of activities for utility company users and TxDOT users:

For utility company users:

- Use the short presentation as an introduction.
- Show live demonstration of the following activities:
  - Register a new utility company user.
  - Log into the utility company user interface.
  - Show the components of the main or home page of a typical utility company user.
  - Submit a new utility installation request covering the six-step process.
  - Show users how they can respond to requests from TxDOT officials during the permitting phase until the approval is issued.
  - Show users what to do during the construction phase after receiving approval.

For TxDOT users:

- Use the short presentation as an introduction.
- Show live demonstration of the following activities:
  - Log into the TxDOT user interface.
  - Show the components of the main or home page of a typical TxDOT user.
  - Submit a new utility installation request (this could be brief).
  - Show users how they can provide their reviews, whether it is routed to users from another TxDOT office or to users from the utility company.
  - Show users what other UIR functionalities they could use to manage their assigned requests.

It is advisable to provide each participant with a computer equipped with an Internet browser. In addition to the main presenter, this instructional setting will require the presenter to have a number of assistants. Ideally, the presenter will need one assistant for each 10 participants. While the short presentation could take 5 to 10 minutes, the interactive part of the training session could be as long as needed. Typically, interactive sessions last around 3 hours.

#### **MEDIUM PRESENTATION**

The target of the medium presentation is a general type of audience, who are not necessarily potential users of the UIR system. The typical setting is a special event or conference, where the main purpose of the presentation is to promote the use of the system and/or provide the audience with general information as well as some technical details about the UIR system. This presentation should take 15 to 20 minutes. If needed, the presenter could customize the presentation by using slides from the long presentation file.

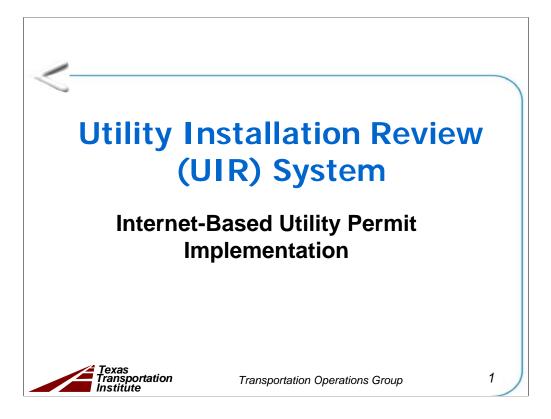

## LONG PRESENTATION

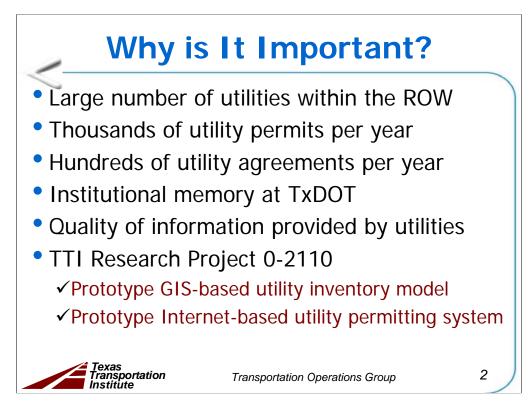

The presenter could use the long presentation for a training session similar to that recommended for the short presentation in situations where Internet access is either difficult or not possible. To address the lack of Internet access, the long presentation file includes most of the screenshots necessary to provide detailed information about the system. The presentation includes three groups of slides:

- Group 1 (slides 1 9): This group of slides is similar to the short presentation and is intended to give general background information about the UIR system.
- Group 2 (slides 10 144): This group of slides includes screenshots from the utility company user interface covering in detail the utility installation permit process from a utility company user perspective.
- Group 3 (slides 145 277): This group of slides includes screenshots from the TxDOT user interface covering the permitting process from a TxDOT user's perspective.

Depending on the training session needs, the presenter could use all (not very likely) or some of the slides. For example, if the training session is for utility company users, the presenter could select all slides from the first two groups and only a handful of slides from the third group, as needed. In total, a training session in this format could last anywhere from 1.5 to 3 hours.

**Short Presentation Presenter Notes** 

Why is it important?

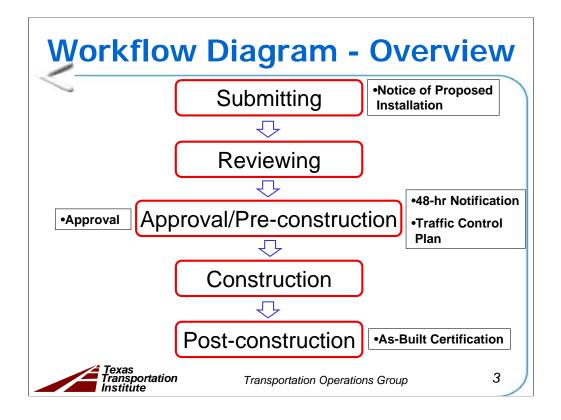

- Large number of utilities within the ROW
- Thousands of utility permits per year
- Hundreds of utility agreements per year
- Institutional memory at TxDOT
- Quality of information provided by utilities

There were two main deliverables from the 0-2110 research project:

**Prototype GIS-based inventory model**: a fairly aggregate model that enabled the representation of features on the ground and provided basic data attribution.

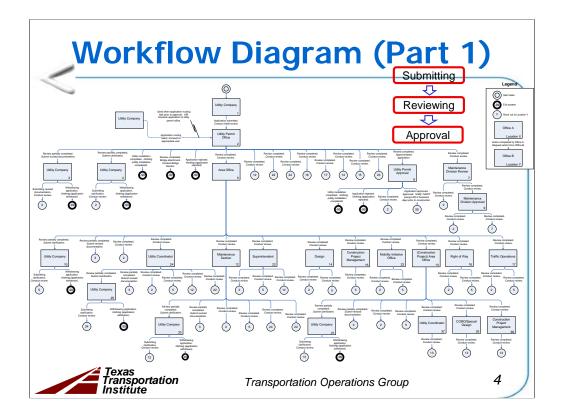

**Internet-based utility permitting system prototype**: an Internet-based system that enabled users to submit utility permit applications online and also the ability to upload coordinate data representing the location of proposed utility installations.

UIR is the result of the implementation of the second research deliverable.

In summary, a utility installation goes through FIVE major workflow phases:

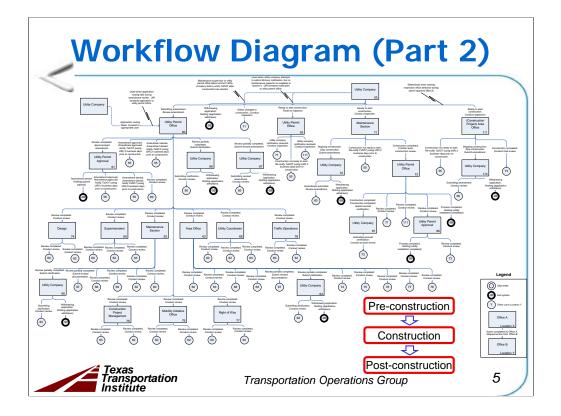

- **1. Submitting.** The installation owner user submits a utility installation request online (also called notice of proposed installation).
- **2. Reviewing.** TxDOT district officials review the feasibility of the proposed installation. The outcome of this process is a recommendation to approve or reject the proposal.
- **3. Approval/Pre-construction.** A designated TxDOT official approves the proposed installation and routes the approval form to the installation owner user for further processing. At least 2 business days prior to starting construction, the installation owner user uses UIR to notify TxDOT that construction is about to commence.
- **4. Construction.** The installation owner proceeds with the construction of the utility installation. TxDOT officials conduct field inspections to verify compliance with the proposed documentation and relevant specifications and regulations.
- **5. Post-construction.** After the TxDOT field inspector notifies the district utility permit office that construction has ended, this office requests the installation owner to submit an as-built certification online. After the submission and review of the as-built certification, the utility permit office archives the completed request.

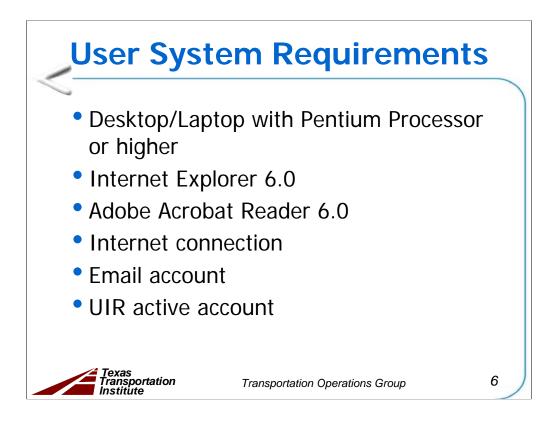

The foundation for the UIR system was a series of meetings and interviews with TxDOT and utility company officials. The result was a comprehensive workflow diagram that gives a detailed overview of the system workflow.

This slide shows the first part of the workflow diagram, covering submitting, reviewing, and approval.

Note: a PDF version of the workflow diagram is included with the UIR system documentation. It is also available through the online UIR Help system.

This slide shows the second part of the workflow diagram, covering pre-construction, reviewing, and approval.

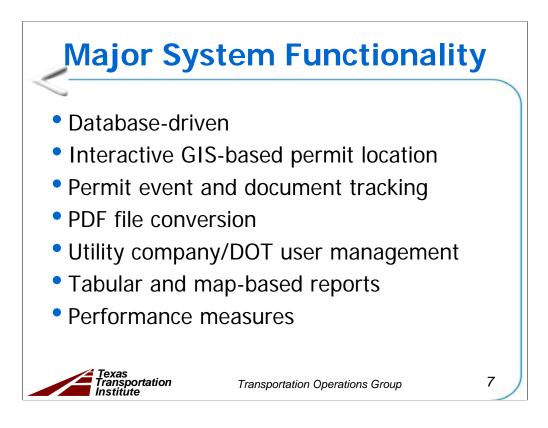

To use UIR, use a desktop or laptop computer with at least the following specifications:

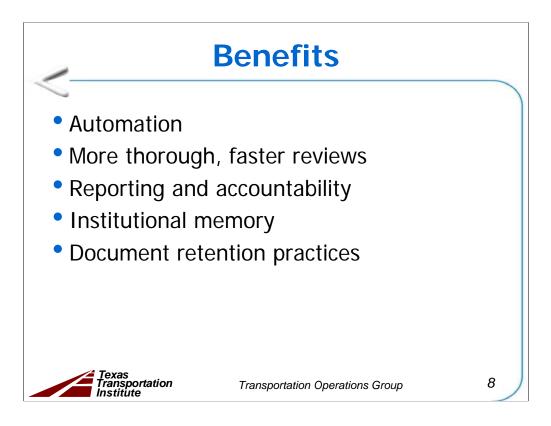

- 1. desktop or laptop computer running Windows® XP with Service Pack 2 (SP2),
- 2. 256 megabytes of memory,
- 3. Microsoft® Internet Explorer® (IE) 6.0 with SP2,
- 4. portable document format (PDF) reader such as Adobe Acrobat Reader 6.0, and
- 5. Internet connection.

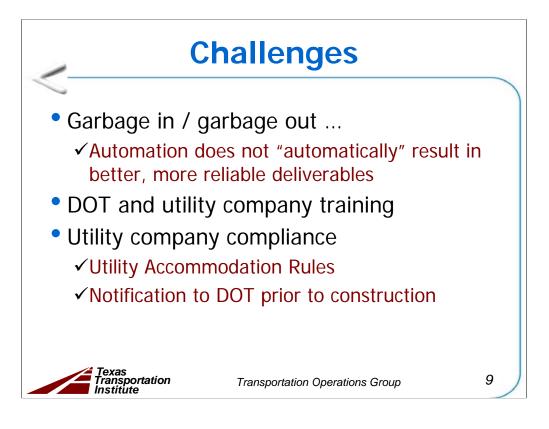

There is no need to install any special client-side software to run UIR. However, you will need a valid, active UIR account to access the system and an email address to receive automated alert emails from the system.

UIR runs on Internet Explorer web browsers (at least version 6 SP2). UIR does not run properly on non-IE browsers (such as Mozilla Firefox®).

GIS: Geographic information system DOT: Department of transportation

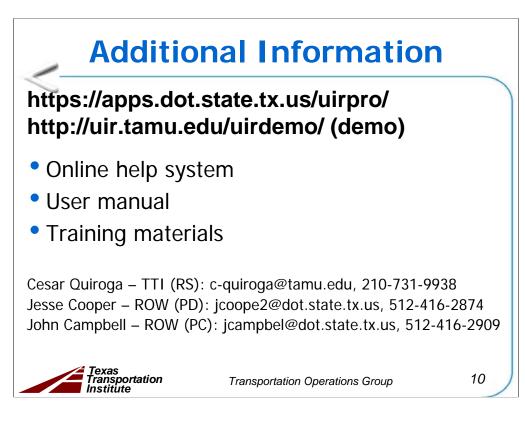

Experience during the implementation testing phase has highlighted a number of challenges:

• Garbage in / garbage out ... : Automation does not "automatically" result in better, more reliable deliverables. Although automation certainly helps, ultimate success will depend on the willingness of individual district officials to make UIR work to its full potential.

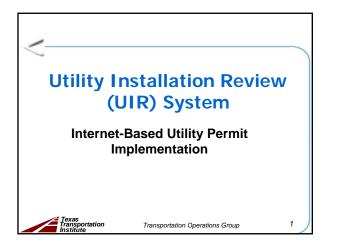

• DOT and utility company training: The need for regular training will never disappear. Although the system provides an interactive online Help system, there will always be a need to provide basic training to new TxDOT and utility company officials. The system (and the installation review process, for that matter) is complex to the point that learning how to use it requires formal training. Regular training is also recommended for users who do not use the system often.

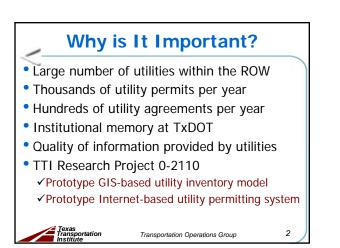

• Utility company compliance: The system has helped to highlight and document two main areas where utility companies frequently fail to comply: the Utility Accommodation Rules (UAR) and providing notification to inspectors at least 2 business days prior to starting construction.

- PD: Project director
- PC: Program coordinator

Objectives of the pilot implementation phase:

- Test at the TxDOT San Antonio District, more specifically Bexar County.
- Use the lessons learned for a statewide implementation of the system.

During the pilot implementation phase, there were issues and concerns from the various stakeholders.

## Project Status (as of 09/24/08)

District	Started	Total	Active
San Antonio	09/05	4,945	1,777
Pharr	06/06	3,650	1,372
Bryan	05/07	583	461
Fort Worth	06/07	1,445	792
Houston	09/07	481	396
Tot	al	11,104	4,798

This slide shows installation requests submitted to TxDOT using UIR, grouped by TxDOT district.

Note: In the case of the Houston District, training was provided to TxDOT and utility company officials, but the district has not officially opened the district to actual submissions from utility companies. The seven installation requests listed are from registered users who did not know the district was still not open.

As of 09/24/08, the UIR database included the following:

410 active utility companies

688 active utility company offices

2,174 active utility company users

127 active TxDOT district and division offices

329 active TxDOT district and division users

- Database-driven
- Interactive GIS-based permit location
- Permit event and document tracking
- PDF file conversion
- Utility company/DOT user management
- Tabular and map-based reports
- Performance measures

Long Presentation Presenter Notes

Why is it important?

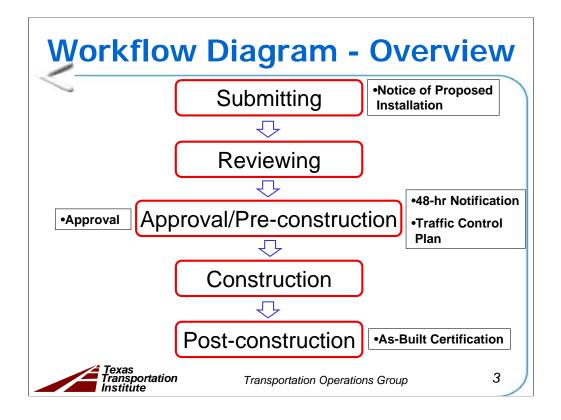

- Large number of utilities within the ROW
- Thousands of utility permits per year
- Hundreds of utility agreements per year
- Institutional memory at TxDOT
- Quality of information provided by utilities

There were two main deliverables from the 0-2110 research project:

**Prototype GIS-based inventory model**: a fairly aggregate model that enabled the representation of features on the ground and provided basic data attribution.

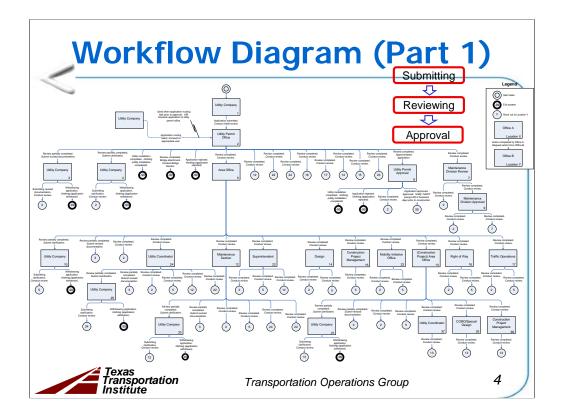

**Internet-based utility permitting system prototype**: an Internet-based system that enabled users to submit utility permit applications online and also the ability to upload coordinate data representing the location of proposed utility installations.

UIR is the result of the implementation of the second research deliverable.

In summary, a utility installation goes through five major workflow phases:

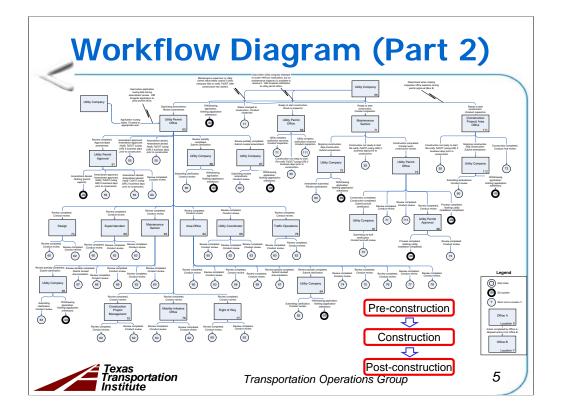

- **1. Submitting.** The installation owner user submits a utility installation request online (also called a notice of proposed installation).
- **2. Reviewing.** TxDOT district officials review the feasibility of the proposed installation. The outcome of this process is a recommendation to approve or reject the proposal.
- **3. Approval/Pre-construction.** A designated TxDOT official approves the proposed installation and routes the approval form to the installation owner user for further processing. At least 2 business days prior to starting construction, the installation owner user uses UIR to notify TxDOT that construction is about to commence.
- **4. Construction.** The installation owner proceeds with the construction of the utility installation. TxDOT officials conduct field inspections to verify compliance with the proposed documentation and relevant specifications and regulations.
- **5. Post-construction.** After the TxDOT field inspector notifies the district utility permit office that construction has ended, this office requests the installation owner to submit an as-built certification online. After the submission and review of the as-built certification, the utility permit office archives the completed request.

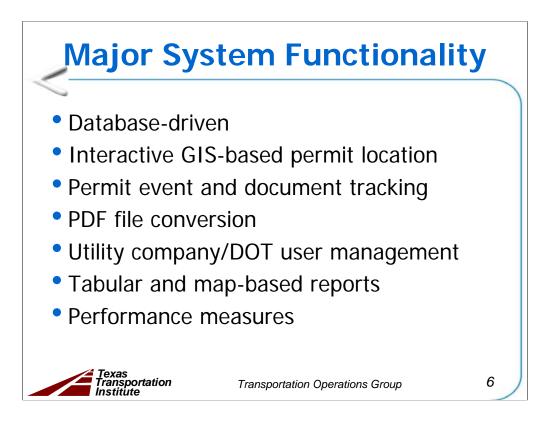

The foundation for the UIR system was a series of meetings and interviews with TxDOT and utility company officials. The result was a comprehensive workflow diagram that gives a detailed overview of the system workflow.

This slide shows the first part of the workflow diagram, covering submitting, reviewing, and approval.

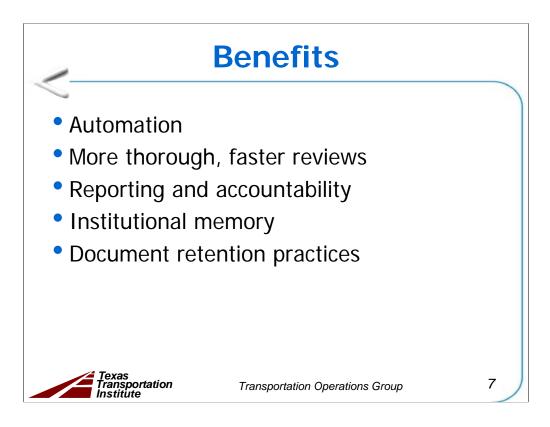

Note: a PDF version of the workflow diagram is included with the UIR system documentation. It is also available through the online UIR Help system.

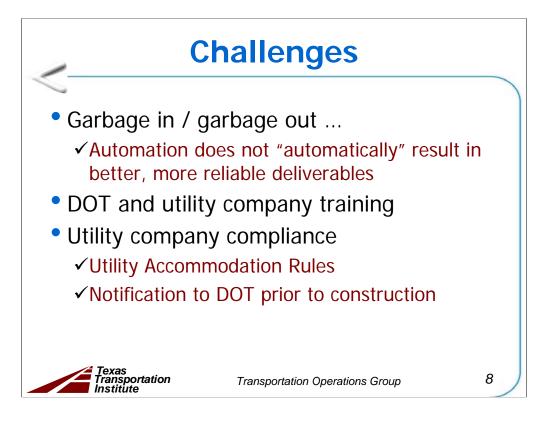

This slide shows the second part of the workflow diagram, covering pre-construction, reviewing, and approval.

This is the login page for utility installation owner users. Users with an active UIR account may access their accounts through this page using their login ID and password.

To access the UIR system, utility installation owners are required to have a UIR user account first. To register for a new account, click the "Click here to register" link on the login page.

Note: The UIR system only allows the registration of a new installation owner user if the installation owner or the installation owner office the user is associated with has not been registered with the system.

TxDOT UIR officials will review and verify the application to ensure that the installation owner office has not been registered previously and the information is genuine and correctly provided.

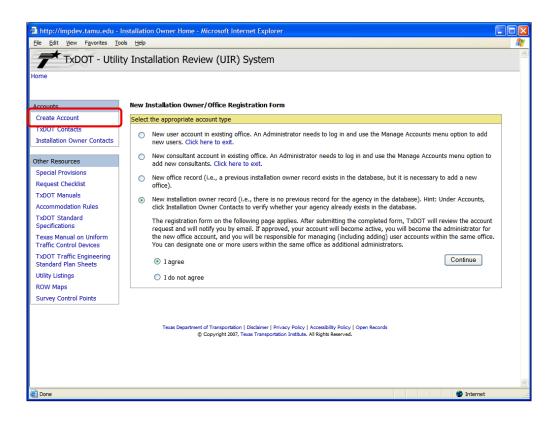

When approved by TxDOT through UIR, the first user registered within a new installation owner office becomes a UIR administrator of this office and can create accounts within the same office for other users.

To ensure the UIR system performs correctly, some necessary configurations may need to be done accordingly. This window shows the settings required by the UIR system regarding cookies, Microsoft Outlook®, and printing with Internet Explorer. A user can access this page by clicking "Note about Cookies, Outlook, and Printing with Internet Explorer" link at the login page.

To register with UIR, some important user responsibilities listed on the "UIR User Acknowledgments and Responsibilities" page have to be acknowledged and accepted before proceeding.

Select the third or fourth option on this page to register if you are the FIRST user within a new installation owner office or installation owner, respectively. Check "I agree," and then click the "Continue" button to proceed with the registration. Otherwise, contact the UIR administrator in your office for your new UIR account.

Check if the installation owner to be created is already on the Installation Owner Name dropdown list. If yes, the installation owner has registered with UIR. Select the installation owner in the dropdown list to create a new office under it using the following steps. Otherwise, click "click here if NOT on the list" to create a new installation owner record.

Fill in the user registration form with installation owner, "home" TxDOT district, office, contact, and security information. The "home" TxDOT district is the district where you will register the new office account and primarily conduct utility installations.

Click the Continue button to proceed to the next step.

When the account application is sent to TxDOT, the UIR system displays a confirmation page and generates a confirmation email to the user.

TxDOT will review the information and will let you know by email. Upon approval, you will be able to login to UIR.

This is a sample email generated by the UIR system to confirm the new user registration.

Once the account request is approved, the applicant will receive an email notification. To view the account approval form, click on the provided link.

Similar to the new installation owner account application procedure, a user can also apply for a new office record under an existing installation owner registered with the UIR system if he/she is the first UIR user within the office. Select the option, and click the "Continue" button to proceed with the registration process.

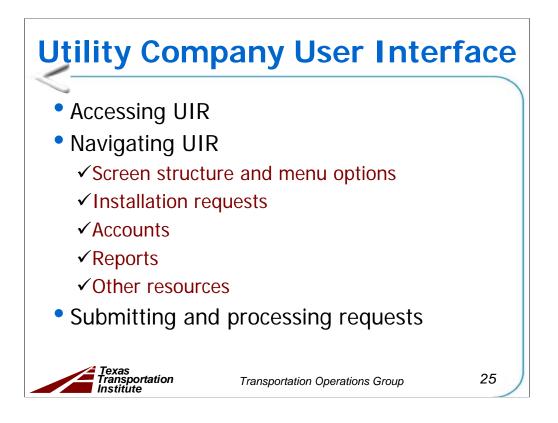

Click the "Continue" button to proceed to the confirmation page. You can also reset the form by clicking the "Reset Form" button.

Make sure the information displayed on the confirmation page is correct, and then click the "Submit" button to send the account application to TxDOT for approval.

The sample slides follow the same structure as the UIR user manual.

Let's go through the menu items listed in the "Installation Requests" menu box.

"My Requests" shows requests submitted by the user. The "Home" view is the same as "My Requests."

If the user does not have requests in the system, the interface shows zero requests on the screen. However, in general, this view shows four tables:

- New Incomplete Requests,
- Incomplete Responses to TxDOT,
- Requests Currently at Installation Owner, and
- Requests Currently at TxDOT.

This page shows the closed requests associated with the installation owner. The page is displayed when a user clicks the "Closed Requests" link. Three types of the closed requests can be shown on this page:

- 1. "My Requests" are the closed requests submitted by the user.
- 2. "Office Requests" are the closed requests submitted by the users within the same office.
- 3. "Installation Owner Requests" are the closed requests submitted by all the users in the same utility company.

These closed requests can be displayed by clicking the buttons at the top of the page, respectively.

This is the "Edit User Account" page. The UIR system allows a user to edit most information as needed, including the login ID (because UIR uses a separate, internal user unique ID). Note that the street address is the office address, which is the same for all users associated with the same installation owner office.

Make necessary changes on the form, and then click the "Update Account" button to apply the changes. Otherwise, click "Cancel Edits" to exit the "Edit User Account" page without applying the changes.

The "Manage Accounts" function allows a user to manage the UIR accounts registered within the same office. On the Manage Accounts page, a user can create new user accounts within the same office, edit the account information of other existing users in the same office, change Installation owner information, and change the office information.

Notice that the "Manage Accounts" menu is only available to installation owner users who have administrative privileges.

To create a new user account, click the "[Show/Hide]" link next to "Create New User Account."

Fill in the new user information on the new account creation page, and then click the "Submit" button to create the new account.

The UIR system has four privilege levels for installation owner users including administrator, user, consultant, and guest. The major differences among these four types of users are:

- 1. An "administrator" has privileges to manage user accounts within the same office and create and submit utility installation requests.
- 2. A "user" may create and submit utility installation requests, but does not have the privilege to manage other accounts.
- 3. A "consultant" may prepare utility installation requests, but does not have the privilege to submit requests.
- 4. A "guest" only has read-access and may not prepare and submit utility installation requests.

Through the illustration, we have created three users within the same office and two offices under the UIR Utility Testing Company.

In the Accounts menu box, there is another menu named "UIR User Responsibilities." It links to a summary of acknowledgments and responsibilities that apply to all registered installation owner users, as shown on this slide.

Let's navigate through the report and map tools under the "Reports" menu.

The report tool allows users to query existing requests and then display the requests in a table-formatted report. There are three types of reports that can be generated: installation request listing, performance measures, and totals. We'll show examples of these different reports on the following slides.

Click the "Report" link on the left to display the report page.

🙆 Done			🥥 Internet

This is the report of totals. It shows the total requests submitted by San Antonio Office 1.

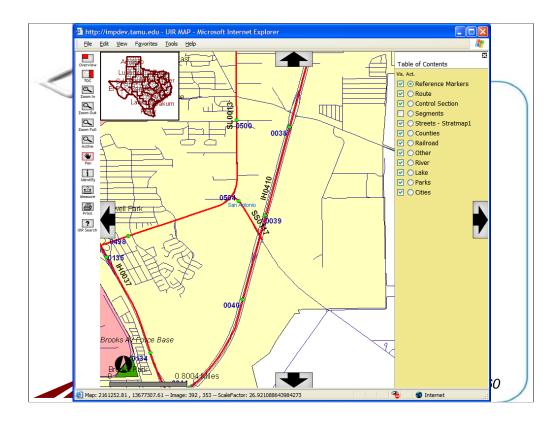

Now let's see how the map tool works. Click the "Map" link under the "Reports" menu to display the map window. The window show a GIS-based map of the State of Texas. To navigate through the map, use the tools on the left side of the map window.

With the "Zoom In" tool activated, zoom in the map to a desired detail level. Click the "TOC" tool to show a list of the layers shown on the map.

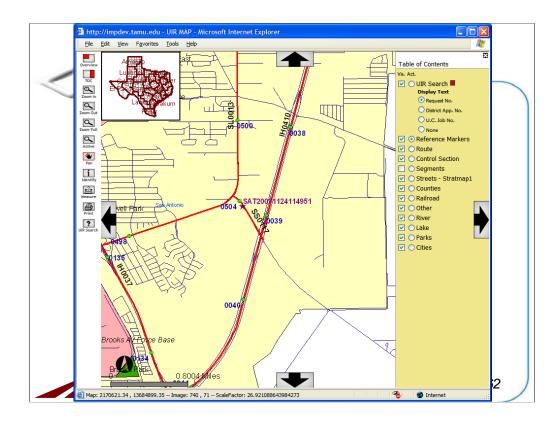

TOC: Table of contents

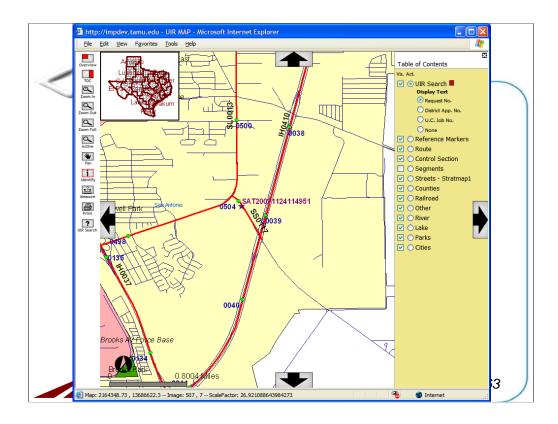

Note that with further zoom-in, additional information becomes available on the map. You can also use the "Pan" tool to move the map around.

	UIRSearch	🌯 🔮 Internet	

Another useful tool available on the map is the "UIR Search" tool. Click the "UIR Search" icon to show this request query form. To locate requests on the map, define the query, and the map will search for the requests and then list them on the map. For example, let's find the request we processed earlier.

As seen on the screen, the request is displayed on the map.

To view the information of this request from this map, you can use the "Identify" tool on the left of the window. Click the "Identify" tool, and then check the radio button for the "UIR Search" layer in the "Table of Contents" window. Click the star representing the request on the map to display its information.

Comment	In this example, the user is certifying that the as-built facility matches the approved documentation and, therefore, as-built plans are not necessary. If there had been changes on the ground compared to the approved alignment, the user would need to select the second option and attach as-built files We constructed this utility installation according to the description, construction plans, special provisions, and other related documents, as described in the Notice of Proposed Installation.

🖉 Done			Interne	•t

You can also display a collapsed event history table, as shown on this screen.

Another useful tool on the map is the "Measure" tool. With this tool activated, a user can measure the distances between consecutive points on the map, as shown on this window. Note that the point tool can only measure the straight-line distances between points. However, to measure a curved distance, you can trace the curve with short consecutive lines, as demonstrated on the screen.

UIR Help	Comment:	
TxDOT Manuals	Voc No N/A For aerial installations, do the plans clearly show and differentiate between existing poles and new	

Let's go through the steps needed for creating and submitting a new utility installation request. To create a new request, you have to complete six steps.

The first step in creating a new request is the Request Checklist. The checklist includes a number of questions that allow utility companies to know what the district is looking for in order to approve an installation request.

For each question, select the appropriate answer (Yes, No, N/A) and provide comments as needed to clarify the answer.

After completing the form, click the "Save and Continue" button.

The third step in creating a new request is to attach files necessary for the proposed utility installation request.

UIR requires the attachment of at least one file. The maximum number of files is five. The maximum file size is 5 megabytes. The application allows uploading files in many formats, such as MicroStation .dgn, AutoCAD .dwg and .dxf, Microsoft Word®, several image formats, and text files. Click the link above the "Upload File" button to see valid file types you can upload.

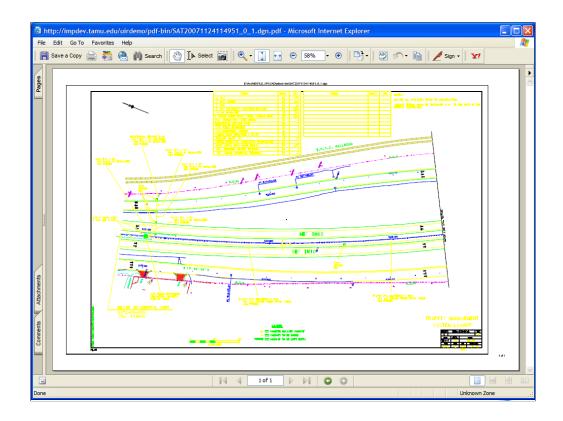

To upload a file, click the "Browse" button, select a file, and then click the "Upload File" button.

When the file is converted to PDF format, a PDF icon following the file name appears. Click on the PDF icon to view the generated PDF file.

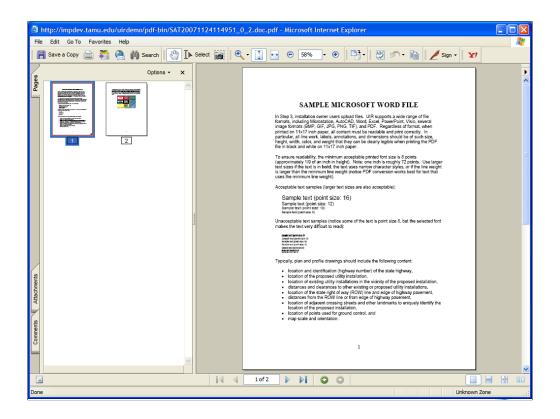

This is the PDF file. Notice that the UIR system automatically converts Microstation and AutoCAD files to 11x17 inch PDF files.

It is highly recommended to zoom in on the window to ensure that important details on the converted file are legible. Also print out a copy of the PDF file to make sure the printout is readable.

This table lists the file formats that are acceptable to the UIR system.

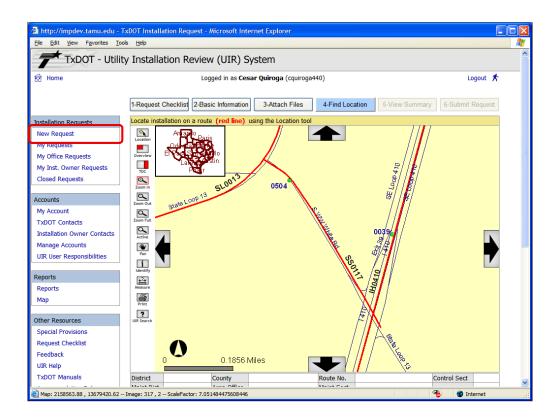

After attaching files, click the "Continue" button to proceed to the fourth step to locate the utility installation on a route map. The location of the installation can be marked on the map using a location tool. However, you will need to zoom in a few times before you will be able to see the route where the utility installation will take place.

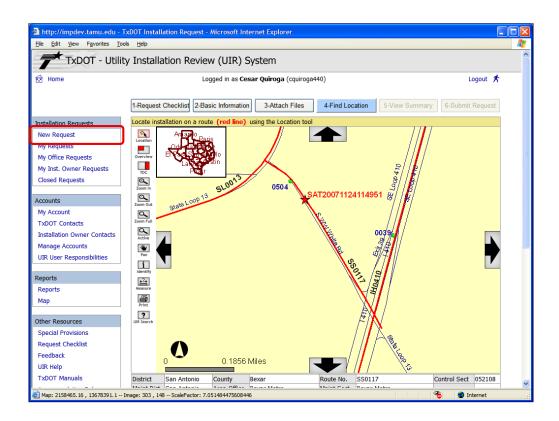

Let's zoom in more.

Zoom in further.

Zoom in to the desired level of detail until the utility installation location is clearly shown on the map.

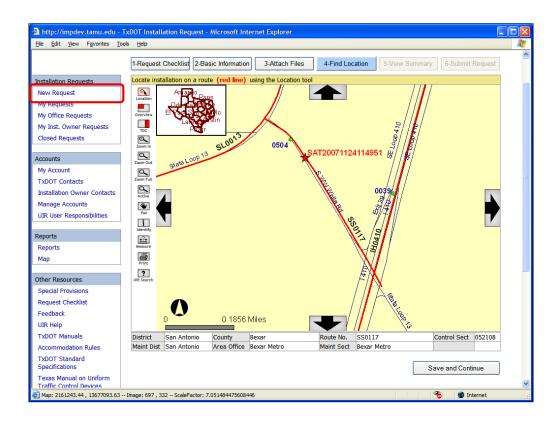

You can now use the "Location" tool to identify the location of your installation request. On the map, identify the utility installation on a route by clicking on that location on the map. You need to click on the map as close as possible to the red line representing the road where the installation will take place.

There are two important things to notice. First, you will see a star marking the location you selected as well as the highlighted request number. Second, the Route No. and County fields are populated automatically based on the selection you made. Note that selecting a location on a route is mandatory.

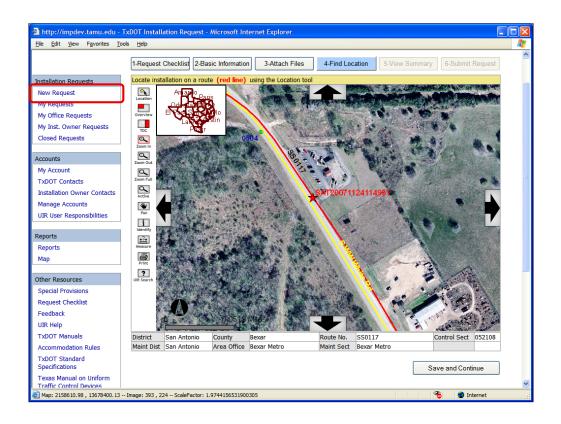

In the current version of UIR, it is only possible to place one red star per installation request. In effect, the red star is a placeholder for the proposed installation.

Note:

- For crossings, place the red star at the location where the proposed crossing intersects the TxDOT route centerline.
- For longitudinal installations, place the red star at one end of the proposed installation and indicate in the description field in Step 2 where the other end is located.

After the proposed installation is correctly located on a route represented by a red line, the "Save and Continue" button becomes available so that you can proceed to the next step.

If you zoom in close enough, it may be possible to see an aerial image (depending on availability) of the site that may help you to better locate the installation. To move to the next step, click the "Save and Continue" button.

After reviewing the application, the final step in creating a new request is to submit the application. In this step, you can also review the application or delete the application. To edit the application, click on the specific step of interest. Click on the "Click here for a preview" link to review the notice.

Read the regulation, and check the box if you agree. You must check "I agree" to submit the application. Finally, click "Submit Application" when you are ready.

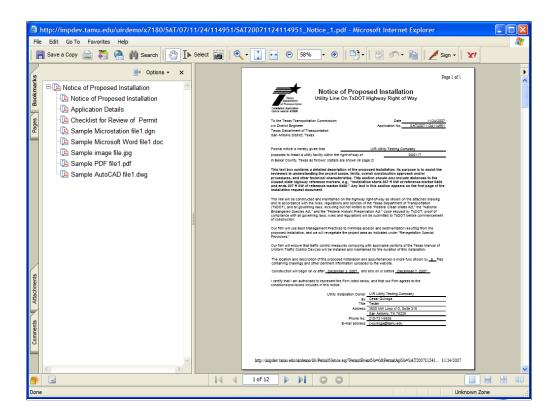

After clicking the "Submit Application" button, the system displays this page indicating the notice of proposed installation is being generated by the system. Do not click any link on this page while the notice is being generated.

While the system is generating the installation request PDF document, the screen displays the approximate number of seconds that have passed. In general, it takes 15 to 30 seconds to complete the process, although the actual duration depends on a number of factors, including number and size of the attachment files as well as on the number of users who may be logged in at the same time and uploading and/or generating PDF files.

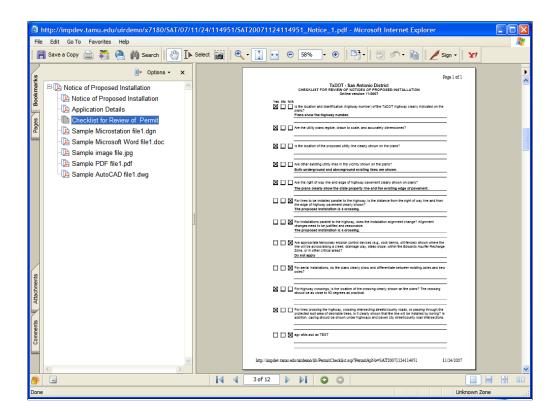

If the utility installation request is submitted successfully, this screen appears to confirm the successful submission of the request. To review the notice, click on the "Notice of Proposed Installation" link in bold.

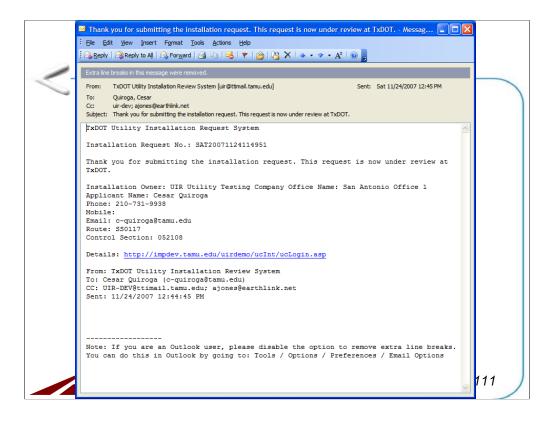

Note: You will receive an email confirming receipt of the application. You will also receive an email letting you know if the application has been approved or rejected. At any time, the status of the application can be checked by logging into the system and selecting "My Requests," "My Office Requests," or "My Inst. Owner Requests."

Here's a sample of the electronic version of the Notice of Proposed Installation. You can save it locally on your computer for future reference, or you can print it out for your records.

The notice of proposed installation includes all information that has been input through the six-step process.

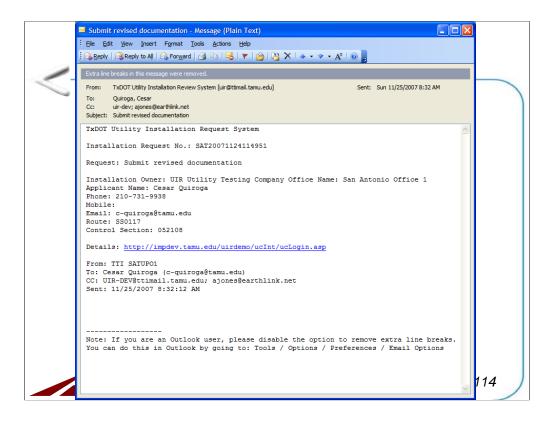

At the same time, an email similar to this one is sent to you automatically by the UIR system.

Once TxDOT starts the review process, it is possible for TxDOT to send the installation request back to the applicant for clarification or for additional documentation. In this example, TxDOT is requesting the applicant to submit revised documentation.

The system also sends an email to the installation owner user as a reminder of the pending action.

In Step 6, add/change the email recipient data, check the "I agree" checkbox, and then click the "Submit Application" button to submit the request back to TxDOT for review.

Again, the system displays a confirmation page after the request was successfully submitted.

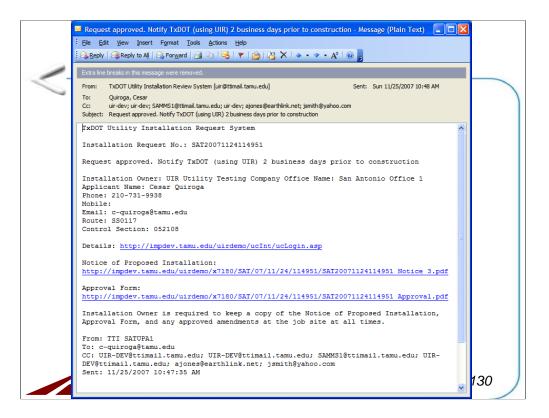

An email like this one will be also generated by UIR and sent to the applicant to acknowledge receipt of the revised request.

On the "Conduct Action" page, select "Ready to start construction / Conduct inspection" and provide information the inspector needs to start the inspection process, including information about the traffic control plan and the name and phone number of a representative of the installation owner in the field. Click the "Submit Action" button to send the notification to TxDOT.

After notifying TxDOT, UIR updates the status of the proposed installation request to "Construction." At this point, the applicant can open and view the request, but the "Conduct Action" button is disabled.

When the TxDOT inspector has determined that construction has ended and has notified the utility permit office, this office requests an as-built certification from the installation owner user. At this point, the text under "Action Needed" becomes "Construction completed. Submit as-built certification."

An email will be also sent to the installation user notifying the action needed to finish the request process.

Request Checklist Feedback UIR Help TxDOT Manuals			·		·

At any point, you can open the request to view the event history. Note that you cannot conduct any action on it since it is closed now.

The sample slides follow the same structure as the UIR user manual.

To use UIR, use a desktop or laptop computer with at least the following specifications:

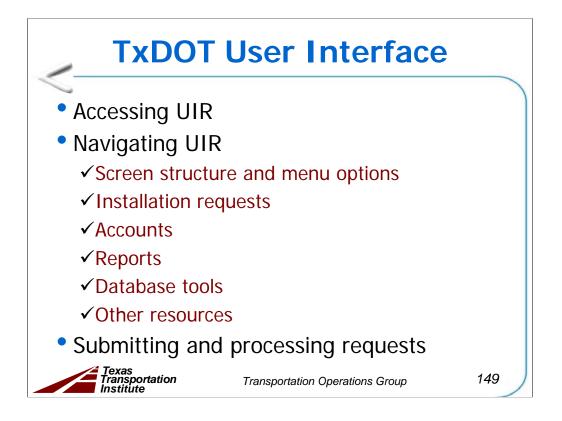

- 1. desktop or laptop computer running Windows XP with Service Pack 2 (SP2),
- 2. 256 MB of RAM,
- 3. Microsoft Internet Explorer (IE) 6.0 with SP2,
- 4. portable document format (PDF) reader such as Adobe Acrobat Reader 6.0, and
- 5. Internet connection.

There is no need to install any special client-side software to run UIR. However, you will need a valid, active UIR account to access the system and an email address to receive automated alert emails from the system.

UIR runs on Internet Explorer web browsers (at least version 6 SP2). UIR does not run properly on non-IE browsers (such as Mozilla Firefox).

This is the home page for a TxDOT user. You can always return to it by clicking on the "Home" button on the top left corner or the "My Requests" link on the left side. Click on "Logout" on the upper right corner to log out of the system.

On the left side, you can find the menu area that includes the following menu boxes:

- 1. Installation Requests: where you can review your assigned requests, your office requests, or all district requests;
- 2. Accounts: where you can review and update your account information as well as manage your contacts;
- 3. Reports: where you can create reports of requests or view the map feature;
- 4. Database Tools (for administrators only): where tools are available for view incomplete requests, purging requests, and rollbacking requests; and
- 5. Other Resources: where you can have access to many handy resources such as manuals, provisions, and the help system.

In the center of the page, you can find your Main Information area where you can view utility installation requests. To review an installation request, click on the request number in the center of the screen.

In the "Accounts" menu box, there are several tools available for TxDOT users. These tools include:

- My Account: where a user can view and edit his/her account information;
- TxDOT Contacts: where a user can view the contact information of the TxDOT users registered with the UIR system;
- Installation Owner Contacts: where a user can view the contact information of the installation owner users registered with the UIR system; and
- Manage Installation Owner Accounts (only available to TxDOT users with administrative privilege): where a user can review and edit the account information of an installation owner user.

Click "My Account" to display your account information. To edit the account, click the "Edit Account" button. Otherwise, click "OK."

Click the "TxDOT Contacts" menu option in the "Accounts" menu to view the contact information of TxDOT users by district.

By default, the page displays the TxDOT users registered in the same district. Select another district from the drop-down list at the top of the page to list TxDOT officials in that district.

There are two views of installation owner user accounts under "Accounts":

Installation Owner Contacts (this slide): This is a read-only view, which allows TxDOT users to click on individual offices to see a listing of registered users in the system. Every UIR user (both TxDOT and utility companies) has access to this view.

Manage Installation Owner Accounts (next slide): This is an editable view of installation owner accounts, which only certain TxDOT users with an administrative privilege can access.

After the installation owner accounts have been validated, it is normally the responsibility of the installation owner office administrators to manage all accounts in their offices. However, certain TxDOT users (utility permit office and utility permit approval) with an administrator privilege have the ability to edit installation owner user accounts.

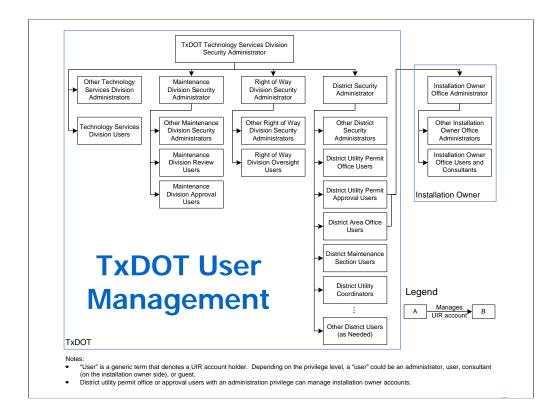

To edit a user account, click the "Manage Inst. Owner Accts," find the name of the user, open the account, and click "Edit Account."

To apply any changes, click the "Update Account" button. Otherwise, click the "Cancel Edits" button to return to the account list.

This slide shows the general structure for the management of TxDOT accounts in UIR. In general, there are two types of security administrators:

• TSD security administrators: An TSD security administrator activates TxDOT units (e.g., districts) and creates and manages security administrator accounts for each TxDOT unit.

• Other TxDOT unit security administrators: A security administrator at a TxDOT unit other than TSD (e.g., ROW Division, Maintenance Division, districts) creates offices within each unit and creates and manages TxDOT users within each office.

Notice that certain district users (utility permit office and utility permit approval) with administrator privileges can manage installation owner accounts (basically, approve and edit accounts).

TSD: Technology Services Division (previously Information Systems Division or ISD)

This is an example of the view a district security administrator sees when clicking the Manage <Unit> Accounts (in this case "Manage SAT Accounts") menu option.

Note: <Unit> represents the three-letter TxDOT unit acronym (e.g., SAT = San Antonio District, PHR = Pharr District, ROW = Right of Way Division, MNT = Maintenance Division).

This is an example of the view a district security administrator sees when clicking the Manage <Unit> Offices (in this case, "Manage SAT Offices") menu option.

Note: <Unit> represents the three-letter TxDOT unit acronym (e.g., SAT = San Antonio District, PHR = Pharr District, ROW = Right of Way Division, MNT = Maintenance Division).

Let's navigate through the report and map tools under the "Reports" menu.

The report tool allows users to query existing requests and then display the requests in a table-formatted report. There are three types of reports that can be generated: installation request listing, performance measures, and totals. We'll show examples of these different reports on the following slides.

Click the "Report" link on the left to display the report page.

To generate an "Installation Request Listing" report, define the query first in the "Select Installation Request" field (see previous slide). Then check this report type in the "Select Report Type" field and select the table fields to be displayed in the report. Click the "Generate Report" button to generate the desired report.

This screen shows the generated report. Note that this report can be exported to a comma-delimited file (.csv extension) that can be opened in Microsoft Excel® format.

🙆 Done			Internet

This is the report of totals. It shows the total requests submitted by San Antonio Office 1.

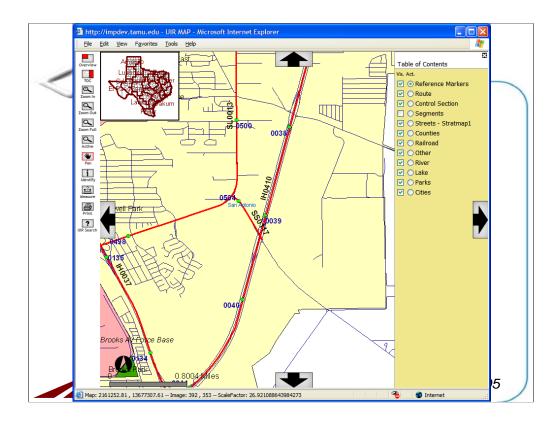

Now let's see how the map tool works. Click the "Map" link under the "Reports" menu to display the map window. The window show a GIS-based map of the State of Texas. To navigate through the map, use the tools on the left side of the map window.

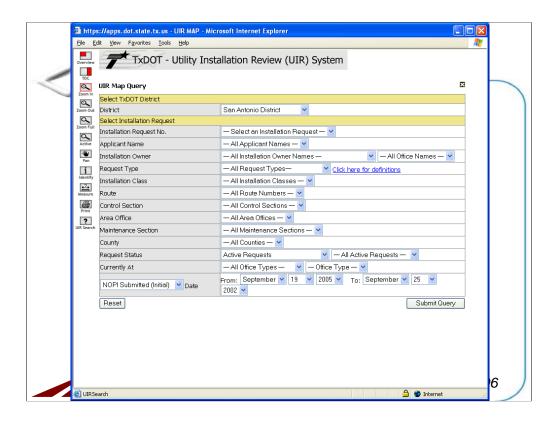

With the "Zoom In" tool activated, zoom in the map to a desired detail level. Click the "TOC" tool to show a list of the layers shown on the map.

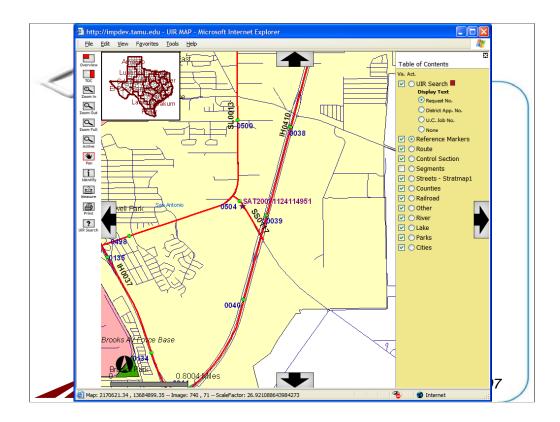

TOC: Table of contents

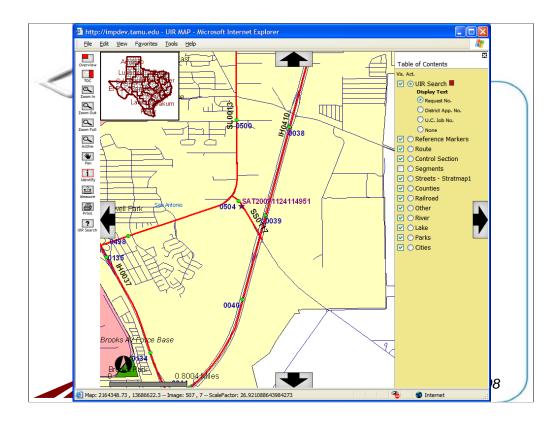

Note that with further zoom-in, additional information becomes available on the map. You can also use the "Pan" tool to move the map around.

Another useful tool available on the map is the "UIR Search" tool. Click the "UIR Search" icon to show this request query form. To locate requests on the map, define the query, and the map will search for the requests and then list them on the map. For example, let's find the request we processed earlier.

As seen on the screen, the request is displayed on the map.

To view the information of this request from this map, you can use the "Identify" tool on the left of the window. Click the "Identify" tool, and then check the radio button for the "UIR Search" layer in the "Table of Contents" window. Click the star representing the request on the map to display its information.

2 nttp://impdev.tamu.edu - 1	xDOT - Request Information - Microsoft Internet Explorer		
Basic Information			
Installation Request No.	SAT20071124114951		
District Application No.	TE-07-53		
Installation Owner Job No.	UTC 2007-01		
Applicant Name	Cesar Quiroga		
Contact Information	c-quiroga@tamu.edu - 210-731-9938		
Installation Owner Name	UIR Utility Testing Company		
Office Name	San Antonio Office 1		
Proposed Construction Schedule	Begin on: 12-03-2007 Finish on: 12-07-2007		
Request Type	Regular Installation Request		
Installation Purpose	Public Utility Installation		
Installation Class	Telephone		
Installation Location	Buried		
Description	(Revised). This text box contains a detailed description of the proposed installation. Its purpose is to assist the reviewers in understanding the project scope, limits, overall construction approach and/or procedures, and other technical characteristics. This section should also include distances to the closest state highway reference markers, e.g., "installation starts 357 ft NW of reference marker 0456 and ends 227 ft SW of reference marker 0458." Any text in this		
<			
🙆 Done	Internet		

This window then appears with the basic information and event history of the identified request.

	marker 0456 and ends	- Microsoft Internet Explorer	^
	section appears on the first page of the installation request document. This text box is used to provide additional relevant information, e.g., if this request is part of		
Special Comments	I his text box is used to provide additional relevant information, e.g., if this request is part of a large project that involves several requests (in this case, the user would list all installation request numbers: SAT20071120083012, SAT20071120100512, and so on).

You can also display a collapsed event history table, as shown on this screen.

Another useful tool on the map is the "Measure" tool. With this tool activated, a user can measure the distances between consecutive points on the map, as shown on this window. Note that the point tool can only measure the straight-line distances between points. However, to measure a curved distance, you can trace the curve with short consecutive lines, as demonstrated on the screen.

In the "Database Tools" menu, there are tools available for TxDOT users with administrative privileges.

A user can view the incomplete requests and incomplete responses by clicking the "Incomplete Requests" link. Incomplete requests are new requests that an installation owner user is in the process of preparing. Incomplete responses to TxDOT are requests for which the installation owner is preparing a response to TxDOT (e.g., to provide revised documentation).

The editing screen enables users to edit the name of a special provision (if it has not been used before with any installation request), edit the status of an existing provision, delete an existing special provision (if it has not been used before with any installation request), or upload new provisions.

To accept the changes, click the "Update Database" button.

To add new provisions to the list:

- click the "Browse" button to select a file;
- click the "Upload File" to upload and convert the file to DPF;
- as needed, repeat the first two steps for other special provision files; and
- when finished, click the "Add Special Provision(s) to List" button.

The maximum file size is 5 megabytes. The maximum number of files that can be uploaded as part of the same transaction is 5.

Are the utility plans legible, drawn to scale, and accurately dimensioned?       09-13-2005       Act         3       Is the location of the proposed utility line clearly shown on the plans?       09-13-2005       Act         4       Are other existing utility lines in the vicinity shown on the plans?       09-13-2005       Act         5       Are the right of way line and edge of highway pavement clearly shown on plans?       09-13-2005       Act         6       For lines to be installed parallel to the highway, is the distance from the right of op-13-2005       Act         7       Alignment changes need to be justified and reasonable.       09-13-2005       Act         8       For stallations parallel to the highway does the installation alignment change?       09-13-2005       Act         7       Alignment changes need to be justified and reasonable.       Are appropriate temporary erosion control devices (e.g., rock berms, silt       for aerial installations, do the plans clearly show and differentiate between existing poles and new poles?       Act         9       For aerial installations, is the location of the crossing clearly shown on the plans? The crossing should be as close to 90 degrees as practical.       09-13-2005       Act         10       For highway crossing intersecting streets/county roads, or plans? The crossing should be as close to 90 degrees as practical.       09-13-2005       Act         11

Click the "Request Checklist" in the "Other Resources" menu to show the checklist questions currently used by a district. These are the questions that appear on the first screen (Step 1) when installations owner users submit new or revised installation requests. The purpose of the checklist is to help installation owners improve the quality of the documentation submitted to TxDOT.

Utility permit office users with an administrative privilege have the ability to edit the checklist questions. Click the "Show All Questions" button to list all checklist questions, both active and inactive, at the district. To edit questions, click the "Edit Checklist Questions" button.

To apply all the changes, click the "Update Checklist" button.

At the bottom of the page, the system also includes a text box for adding new questions to the list. To add a new question, type the question in the text box, and then click the "Add Question to List" button.

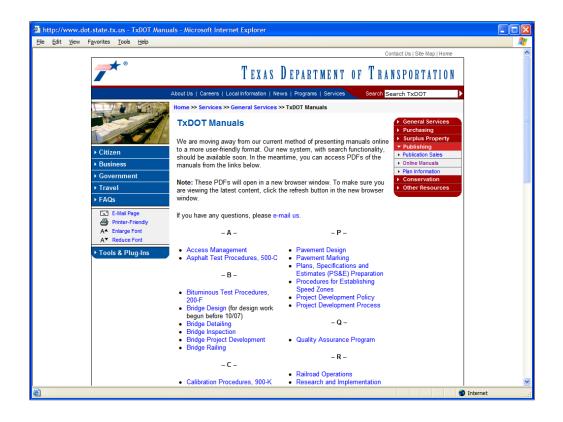

The system also provides a feedback tool in the "Other Resources" menu. To provide feedback, type it in the text box, and then click "Send Feedback."

Clicking the "UIR Help" link (under the "Other Resources" menu) opens the online UIR help system. Notice that UIR includes two separate help systems: one for installation owners (accessible to installation owner users when they click the "UIR Help" link) and a second one for TxDOT users (only accessible to TxDOT users).

The other links provided in the "Other Resources" menu are the same as those available in the installation owner interface. These links are:

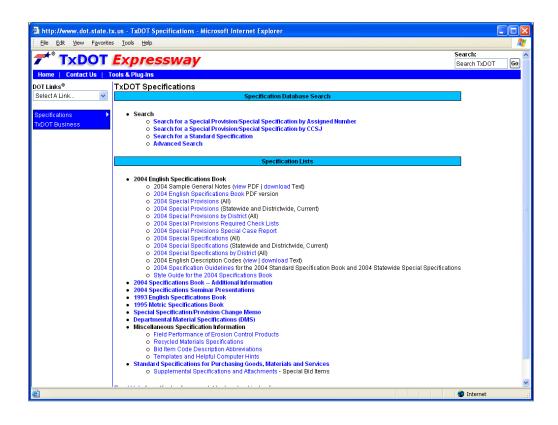

- TxDOT Manuals,
- Accommodation Rules,
- TxDOT Standard Specifications,
- Texas Manual on Uniform Traffic Control Devices,
- TxDOT Traffic Engineering Standard Plan Sheets,
- Utility Listings,
- ROW Maps, and
- Survey Control Points.

Clicking the "TxDOT Manuals" link (under the "Other Resources" menu) displays the web page where TxDOT manuals are listed.

The following slides will go through of reviewing and processing installation requests.

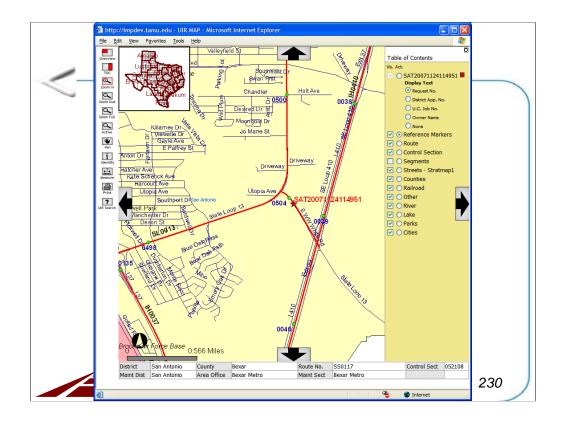

Opening an installation request shows a view with three buttons: Basic Information, Event History, and Conduct Action. This screen shows the basic information. Notice that the "Conduct Action" button is enabled if there is a pending action by the user. Otherwise, the button is disabled.

Notice the Basic Information screen includes links to a number of documents including the request (also called notice of proposed installation) and all the attachment files (both original format and PDF). Scrolling down the screen provides access to a map link. Clicking that link opens a new window that displays the location of the proposed installation. The next two slides show the request PDF file and the map.

Note: the system automatically assigns unique numbers to installation requests (e.g., SAT20071124114951) in the following format: <three-letter TxDOT district code>yyyymmddhhmmss, where yyyymmddhhmmss represents the date and time (in military time format) when an installation owner user started the transaction to submit a new installation request.

This is the installation request PDF file.

This is the map that shows the location of the proposed installation.

After routing an installation request, the request is no longer visible under "My Requests" or "My Office Requests." However, it is visible under "My District Requests."

To find that request, click the "My District Requests" link under Installation Requests, and then click the appropriate number under "Requests currently at Installation Owner." It is also possible to search for the installation request by using the search tool.

It is also possible to open and route installation requests that other TxDOT users in the same office have received for processing. This functionality is useful in situations where officials are out of the office for extended periods of time (e.g., on vacation).

In all cases, the process is the same. After clicking the "My Request" or "My Office Requests" links, click on a request number to display its basic information.

1 - 2 weeks	No work on weekends. Restore ROW to original condition.	
> 2 weeks	When installing utility lines on controlled access highways, your attention is directed to governing laws, especially to Texas Transportation Code, Title 6, Chapter 203, pertaining to Modernization of State Highways; Controlled Access Highways. Access for serving this installation shall be limited to access via (a) frontage roads where provided, (b) nearby or adjacent public roads or streets, (c) trails along or near the highway right-of-way lines, connecting only to an intersecting roads; from any one or all of which entry may be made to the outer portion of the highway right-of-way for normal service and maintenance operations. The Installation Owner's rights of access to the through-traffic roadways and ramps shall be subject to the same rules and regulations as apply to the general public except, however, if an emergency situation occurs and usual means of access for normal service operations will not permit the immediate action required by the Utility Installation Owner in making emergency repairs as required for the safety and welfare of the public, the Utility Owners shall have a temporary right of access to and from the through-traffic roadways and ramps as necessary to accomplish the required emergency repairs, provided TxDOT is immediately notified by the Utility Installation Owner was the advection and selecutate provision is made have the lititive Installation Owner for	8
🙋 Done	🔮 Internet	

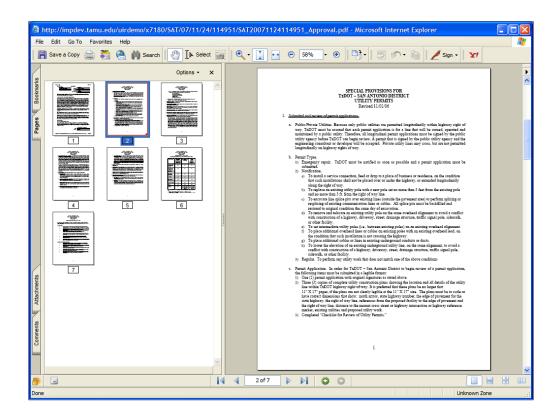

As needed, preview the approval by clicking the "Show Approval Preview" button at the bottom of the page. If the approval form is correct, click the "Submit Review" button to enable UIR to generate the approval form PDF file.

If the approval transaction is successfully, the system displays this confirmation page.

Click the link provided on the confirmation page to review a PDF version of the approval form.

It is recommended to carefully review the form to make sure all the pages in the PDF file are correctly generated.

Under normal circumstances, utility installation owners should notify TxDOT (using UIR) 2 business days prior to starting construction. If they fail to notify TxDOT and construction has started—or even finished—it may be possible for a TxDOT user to "take control" of a request and transfer it to the TxDOT inspector.

As part of the inspection process, the inspector has three routing options when clicking the "Conduction Action" button:

• Ask the installation owner user to re-notify TxDOT at a later date (shown on this slide). In this case, UIR transfer control of the request back to the installation owner user.

• Stop construction and request the installation owner user to submit an amendment. In this case, UIR transfer control of the request back to the installation owner user.

• Notify the utility permit office that construction has ended. In this case, UIR transfer control of the request to a utility permit office user.

This screen shows the action to stop construction and request the installation owner user to submit an amendment.

This option might be necessary if, in the opinion of the inspector, the conditions on the ground are such that an amendment to the previously approved proposal is warranted. Examples of potential conditions include the determination of the need for significant changes in horizontal alignment, vertical alignment, and/or construction schedule. If the inspector chooses this option, UIR will transfer control of the installation request to the applicant (i.e., when the applicant opens the request, the "Conduct Action" button becomes enabled).

This is an updated view of the event history associated with the installation request.

Notice that the as-built certification must be consistent with any comments by the inspector regarding any potential changes in alignment with respect to the originally approved request. If there are inconsistencies, the utility permit office user should return the certification back to the installation owner user.

## Utility Installation Review (UIR) System

Internet-Based Utility Permit Implementation

Transportation Operations Group

#### Why is It Important?

- Large number of utilities within the ROW
- Thousands of utility permits per year
- Hundreds of utility agreements per year
- Institutional memory at TxDOT
- Quality of information provided by utilities
- TTI Research Project 0-2110

   Prototype GIS-based utility inventory model
   (Postature laterast based utility associations used)
  - ✓ Prototype Internet-based utility permitting system

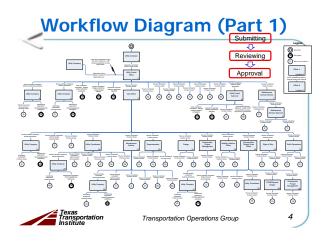

Transportation Operations Group

2

# Workflow Diagram - Overview Submitting

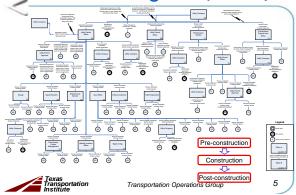

#### Workflow Diagram (Part 2)

#### Major System Functionality

- Database-driven
- Interactive GIS-based permit location
- Permit event and document tracking
- PDF file conversion
- Utility company/DOT user management

Transportation Operations Group

- Tabular and map-based reports
- Performance measures

#### **Benefits**

- Automation
- More thorough, faster reviews
- Reporting and accountability
- Institutional memory
- Document retention practices

Transportation Operations Group

#### Challenges

- Garbage in / garbage out ...
   Automation does not "automatically" result in better, more reliable deliverables
- DOT and utility company training
- Utility company compliance
  - ✓Utility Accommodation Rules
  - ✓ Notification to DOT prior to construction

8

Basic Information Installation Request No. District Application No.	SAT20071124114951
District Application No.	
	TE-07-53
Installation Owner Job No.	UTC 2007-01
Applicant Name	Cesar Quroga
Contact Information	c-quiroge@tamu.edu + 210-731-9938
Installation Owner Name	UIR Utility Testing Company
Office Name	San Antonio Office 1
Proposed Construction Schedule	Begin on: 12-03-2007 Finish on: 12-07-2007
Request Type	Regular Installation Request
Installation Purpose	Public Utility Installation
installation Class	Telephone
Installation Location	Buried
Description	(Revised). This text bus contains a detailed description of the proposed instalation. Ts purpose is to assist the reviewers in understanding the project scope, limits, overall construction approach and/or procedures, and other technical characteristics. This section should also include distances to the desent state highway reference markers, e.g., "instalation starts 337 ft tW of reference marker 0458. Any text in this marker 0455 and ends 327 ft SW of reference marker 0458. Any text in this

	Basic Information Event History
Basic Information	
Installation Request No.	SAT20071124114951
District Application No.	TE-07-53
Installation Owner Job No.	UTC 2007-01
Applicant Name	Cesar Quiroda
Contact Information	c-quiroga@tamu.edu - 210-731-9938
Installation Owner Name	UR Utility Testing Company
Office Name	San Antonio Office 1
Proposed Construction Schedule	Begin on: 12-03-2007 Finish on: 12-07-2007
Request Type	Regular Installation Request
Installation Purpose	Public Utility Installation
Installation Class	Telephone
Installation Location	Buried
Description	(Revised). This text bux contains a detailed description of the proposed instalation. Ts purpose is to assist the reviewers in understanding the project scope, limits, overall construction approach and/or procedures, and other technical characteristics. This section should also include distances to the closest state highway reference markers, e.g., "Instalation starts 35/ ft two of reference marker 0455 and ends 322 rt Stv0 of reference marker 0458. Comment:	Process completed.
Event 13	Submitting as-built certification / Conduct as-built review
When	11/25/2007 11:36:26 AM
By	Cesar Quiroga (UR Utility Testing Company, San Antonio Office 1) - cquiroga440
Send to	TTI SATUPO1 (TxDOT, Utility Permit Office) - setupo1
Comment	In this example, the user is certifying that the as-built facility matches the approved documentation and, therefore, as built plans are not necessary. If there had been changes to the ground compared to the approved alignment, the user would need to select the second option and attach as-built files. We control the second compared to the second we control test the second compared to the description, construction plans, special we control test the second second second to the description, construction plans, special test and the second s
