## THE AUTHORS

Clifford O. Hays, Jr., is an Instructor in the Department of Civil Engineering at The University of Texas at Austin. He has experience as a structural engineer with the U. S. Army Corps of Engineers, as an Assistant Professor of Building Technology at Auburn University, and as a research engineer scientist with the Center for Highway Research at The University of

Texas at Austin. His research interest is primarily in the areas of (1) frame analysis, (2) structural design, and (3) nonlinear structural behavior.

Hudson Matlock is a Professor of Civil Engineering at The University of Texas at Austin. He has a broad base of experience, including research at the Center for Highway Research and as a consultant for other organizations such as the Alaska Department of Highways, Shell Development Company, Humble Oil and Refining Company, Penrod Drilling Company, and Esso Produc-

tion Research Company. He is the author of over 50 technical papers and 25 research reports and received the 1967 ASCE J. James R. Croes Medal. His primary areas of interest in research include (1) soil-structure interaction, (2) experimental mechanics, and (3) development of computer methods for simulation of civil engineering problems.
