Report No. 512-10

Mr. Phillip L. Wilson
State Planning Engineer, Transportation
State Department of Highways
and Public Transportation
Austin, Texas 78701

Attention: Mr. Ivan K. Mays

Dear Sirs:

Enclosed is a reproducible original and seven copies of the flexible pavement evaluation (visual survey) information on FCIP Study No. 1-10-75-512, "Post Construction Evaluation of U.S. 69 Sulphur Asphalt Pavement Test Sections in Lufkin, Texas".

As you may recall alternate reports on the condition of this SEA field trial are to consist of a visual survey and a set of slides including a view of each test section. A set of these slides with an identification key is also enclosed.

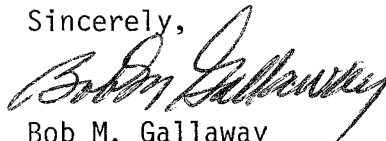

As of October, 1981, the entire segment of the field trails (consisting of ten sub-sections) is in excellent condition with an overall ride quality as measured by the Mays Meter of 4 +.

Wheel track depressions in the sulphur sections are in general less than 1/8". The wheel track depressions in the control sections average about 5/16".

The cracking is limited to minor longitudinal cracks in the control sections and connecting cracks where numerous cores have been taken during the past almost six years.

If you have any questions, please feel free to call.

Sincerely,

Bob M. Gallaway
Research Engineer
