PREFACE

This is the second Annual report of the Council for Advanced Transportation Studies, Division of Research. During this year we have seen more clearly the problems associated with holding together a large multidisciplinary research effort. While the task has not been easy, the financial support available to the group has grown, as has the faculty participation.

Thanks are due to the many faculty and staff listed herein who are responsible for the growth and development of the program. During the year we have made preparations to move into new facilities in the new Ernest Cockrell, Jr. Teaching Center. At this writing our moving task is complete and we are looking forward to 1974-75 with anticipation of continued healthy growth.

> W. R. Hudson Director

SUMMARY OF RESEARCH OBJECTIVES AND ACCOMPLISHMENTS

The purpose of the Council for Advanced Transportation Studies as well as its research goals and accomplishments are briefly stated as follows:

Mission or Purpose:

The University of Texas Council for Advanced Transportation Studies (CATS) is a multidisciplinary organization formed to carry out research and educational programs in transportation. The program focuses on national, state and local transportation problems and provides an academic background for the development of professional careers in several fields of transportation. The Council provides a forum for faculty and student participation through close working relationships with industry and government agencies having common goals and interests in transportation education and research.

Research Goals and Objectives:

The research division of the Council conducts multidisciplinary transportation research within The University and serves as a link between The University, industry, other universities and all levels of government for interaction on transportation problems. The Division of Research (DORT) maintains awareness of the changing needs of the society by exchanging new transportation ideas with industry and government through meetings, conferences and seminars. A continuous effort is made by DORT to identify new transportation research possibilities for The University community, focusing on specific transportation needs to solve human problems.

Significant Accomplishments:

The Council for Advanced Transportation Studies, Division of Research has in the past two years developed the largest multidisciplinary Transportation Reserach Program, funded under the University Research Program of the U.S. Department of Transportation. The function of the research outlined herein

is to encourage multidisciplinary teams of researchers to attack transportation problems on a broad front. The University of Texas through its Council for Advanced Transportation Studies has a group of 73 faculty members from 25 disciplines in 10 schools and colleges who are interested in these problems.

In addition to this program, another project on vehicle noise studies has been funded by DOT through the Council, as is also the case for a study of low-cost Forest Service roads funded by the Forest Service. Two state interagency contracts have also been obtained, one through the Governor's Office, the other through the Austin State School of Mental Health-Mental Retardation. Because of our close ties with government and industry, several of our findings and proposals are currently being implemented.

SELECTED HIGHLIGHTS DURING THE YEAR

In May, the Council received a contract continuation at \$375,000 from the Department of Transportation for research on "Transportation to Fulfill Human Needs in the Rural/Urban Environment". University contributed funds and services total \$79,500.

During the year CATS published 11 Research Reports, 14 Research Memos and 1 Miscellaneous publication. 8 papers were published by faculty related to the program, 15 oral presentations were made and 10 theses were produced under CATS sponsorship. A complete list of CATS publications is included herein.

A joint conference was held with Texas A&M University to discuss Transportation-Energy related problems in Texas. The importance of the joint interaction was described in a Dallas Morning News Editorial published December 29, 1973 as follows: "The effort by researchers of the two Texas Universities to pool their knowledge and wisdom in certain areas such as transportation is a step in the right direction." "In joining together to find answers to some of the problems stemming from the energy shortage, they can perform an invaluable service to Texas and to the nation."

The Council hosted a two day seminar in March, 1974 on Department of Transportation University Research Program Projects with Iowa State University, George Washington University and the Department of Transportation. Topic Monitors from the Department of Transportation, students and officials from the State of Texas interacted with the two primary projects in the University Research Program , which are concentrating on the Transportation problems in the Rural Environment.

A Seminar was held on "A Pavement Design System for Forest Service Roads" May 20-22, 1974, this included representatives from the U.S. Forest Service Regional offices and Washington Headquarters who met with representatives from the Texas Highway Department, the Council for Advanced Transportation Studies and faculty from other universities.

Principal Investigators from research topics on "Improvement of Intermodal Freight Transportation in the Southwest" and "Environmental Impact of

Interurban Transportation Systems on Rural Communities," participated in a Department of Transportation conference in Washington, D. C. on "Transportation problems of the Rural Environment." In addition, the Principal Investigator from the Topic on "Access to Essential Services" participated in a workshop on "Transportation and the Aged and the Handicapped" in Brooklyn, New York.

As a result of efforts to establish cooperative interaction with government and industry the Council received an interagency contract for \$2,245 with the Governor's Office for Planning and Coordination and an interagency agreement with the Austin State School of the Texas Department of Mental Health and Mental Retardation for \$2,190.

Foreign Recognition

During a year several members of the group were invited to participate in Foreign Meetings, lectures and Seminars.

Dr. Anthony Healey, Associate Professor of Mechanical Engineering and corresponding principal investigator of the Topic entitled, "Evaluation of Riding Quality Factors in Multimodal Systems" presented a paper in August to "The International Colloquiem on Field Simulation" in London, England.

Dr. W. R. Hudson, Director of Research was invited to Utrect Holland to serve as Principle speaker at the Annual Meeting of the Dutch Transportation Research Center. This meeting, attended by over 600, attracted participants from all Northern Europe. Dr. Hudson also presented lectures at the Technical University, Delft and conducted seminars for other organizations in Holland.

Dr. Ronald Briggs, Assistant Professor of Geography met with faculty from the Department of Geography of Liverpool University while in Liverpool, England to discuss the multidisciplinary research program of the Council for Advanced Transportation.

In August 1974, Dr. W. R. Hudson presented several papers and lectures at the National Institute of Road Research in Pretoria, South Africa and at the Conference on Asphalt Pavements for South Africa in Durbin, South Africa. Combined attendance at the lecture and seminars totaled over 700 persons. On the return trip Dr. Hudson stopped at Brazilia, Brazil at the Geipot Research group and the University of Brazilia to discuss cooperation.

In June a joint Conference was held in Puebla, Mexico with the Regional Roads Association, the Mexican government and the University of Americas. Participants included Dr's. T. W. Kennedy, W. R. Hudson and B. F. McCullough.

In November 1973, Dr. T. W. Kennedy participated as a speaker in the Annual Meeting of the Canadian Transport Association. Participating with him was Dr. Ralph Haas, former visiting professor in Civil Engineering. In March, Dr. W. R. Hudson visited Toronto as a guest lecturer at the Ontario Ministry of Transport and at Waterloo University.

COUNCIL STAFFING

The research sponsored through the CATS Division of Research is presently staffed by full-time faculty members and students and a minimum of non-teaching staff. This is in keeping with the goals and objectives of the University and the DOT University Research Program to keep research related closely to academic programs. The project staff reports directly to the Office of the President through the Council's Executive Committee.

Dr. W. R. Hudson is Director of the Division of Research of CATS Hudson is a Professor of Civil Engineering with teaching duties in Transportation. He also has solid administrative ability, as demonstrated by his experience as Associate Dean of Engineering and as Acting Director for the Center for Highway Research. Dr. John Betak joined the Council in May 1974 as Assistant Director of Research. Betak is a professional planner and geographer with several years experience in teaching, transportation research and research administration. He joined us from a position as Assistant Professor of Geography at McMaster University, Canada.

The key research team consists of principal investigators from various disciplines as follows:

Dr. C. Michael Walton, Assistant Professor of Civil Engineering-Transportation,
Dr. Ronald Briggs, Assistant Professor of Geography,
Professor Robert Means, Professor of Law,
Professor Richard Dodge, Associate Professor of Architecture-Planning,
Dr. Mark Alpert, Associate Professor of Business-Marketing,
Dr. Stanley Arbingast, Professor of Business Administration-Director, Bureau of Business Research,
Dr. Anthony Healey, Associate Professor of Mechanical Engineering,
Dr. Pat Burnett, Assistant Professor of Geography,
Dr. William Dunlay, Assistant Professor of Civil Engineering,
Mr. Charles P. Zlatkovich, Research Associate, Bureau of Business Research,

Dr. Shane Davies, Associate Professor of Geography,

Dr. Alfred Smith, Professor and Director, Center for Communications Research,

Dr. Paul Jensen, Associate Professor of Mechanical Engineering,

Dr. James Fitzsimmons, Associate Professor of Management,

Ms. Charlotte Clarke, Assistant Professor of Social Work,

Dr. Carol Deets, Associate Professor of Nursing,

Dr. Henry Steiner, Associate Professor of Management,

- Professor Charles T. Clark, Associate Professor of Business Statistics,
- Dr. Ronald Stearman, Professor of Aerospace Engineering and Engineering Mechanics,

Dr. Larry Hoberock, Assistant Professor of Mechanical Engineering,

Dr. C. C. Smith, Assistant Professor of Mechanical Engineering, and

Dr. Robert Young, Professor of Psychology

RESEARCH ACTIVITIES

During this past year the breadth of the research activity has more than doubled in terms of number of projects. The variety of participation across the campus continues to increase.

The major effort of the Division of Research, Council for Advanced Transportation Studies, for the 1973-74 year has been the successful continuation of a \$1,500,000 research program with the U.S. Department of Transportation.

In addition to the large DOT contract, a number of research efforts are also being conducted as follows:

- (1) Vehicle Noise Studies E. L. Hixson, Electrical Engineering
- (2) A Study of Low-Cost Forest Service Roads W. R. Hudson, Civil Engineering, B. F. McCullough, Civil Engineering
- (3) "Research to Devise a Plausible Scenario for the Development of a Comprehensive Transportation System" by Robert Mather
- (4) "Transportation Services for the Mentally Retarded" by Shane Davies and John Carley,
- (5) "Gasoline Retailers Right of Survival" by James Treece
- (6) "Energy Crisis and Its Effect on Texas Highway Accident Experience" by C. M. Walton and Edward Frome
- (7) "Analysis of Effectiveness of Transportation Alternatives" by Sandra Rosenbloom
- (8) "Interagency Contract for the Governor's office for Educational Research and Planning," by Dr. Ronald Briggs, Geography

Abstracts of all these projects are included below.

"TRANSPORTATION TO FULFILL HUMAN NEEDS IN THE RURAL/URBAN ENVIRONMENT"

Several areas of the United States can be characterized as rural or sparsely populated in which exist large, widely spaced urban centers. Texas for example, has an area of 267,000 square miles, 11 million people and contains 25 Standard Metropolitan Statistical Areas with 6 urban areas exceeding 250,000. These rural/urban areas include not only the Southwest but portions of the Southeast, Midwest, and Farwest. These regions face not only the typical problems associated with travel in dense urban areas, but also the problems of intra-rural and inter-urban travel. Thus, the importance of a balanced transportation system takes on special significance in such an environment.

Transportation research and development should be directed toward solving human problems. In the past, new technology has sometimes been applied without adequate consideration of human needs. It is now essential that we carefully consider human needs in the development of transportation systems for the 1970's and 1980's, particularly with regard to personal mobility and with regard to the movement of goods and related essential services.

A large, well-directed, multidisciplinary university program can assist with these efforts by bringing together well-balanced, critical-sized multidisciplinary teams of faculty and students to study the problems and to interact with state and local governments and industry in defining and solving them. The training of college graduates in the transportation field is of crucial importance to this issue.

This project is establishing a broad basis for continuing interaction and research in transportation with industry and local, state, and federal government agencies. As outlined above, a general theme has been selected for developing a program of research which will help solve long-range problems, while at the same time providing immediate useful results for the sponsors.

The broad objective of the program is to solve problems with the sponsors and cooperating agencies related to human needs and transportation needs in the rural/urban environment as typified by the great Southwest. That is to say that a variety of research can be accomplished keeping in mind the needs of both the urban and the rural traveling public. In this second year, the program has expanded to a group of six objectives as outlined below.

A series of eight reports, 18 Research Memos and several other documents have been produced. These are summarized in the section on publications.

Access to Essential Services

The concern here is with the role of transportation in providing accessibility to essential services for the rural and needy populations, both

emergency and ongoing. Emergency services include fire and police protection and emergency medical assistance. Ongoing services include education, social and rehabilitation services, and health care.

Inequality in the availability of essential services between rural and urban areas is being studied. The inequality is probably a consequence of the inability of the dispersed rural population to generate a tax base or a demand concentration sufficient to provide a dense network of facilties. However, transportation techniques must be developed to make essential services available to the rural and needy populations.

Existing research is deficient because of its failures to consider the interrelationships of essential services and to recognize the complete interdependencies between the demand for essential services, the demand for transportation, the location of the population, and the location of service facilities. Present studies have not adequately considered the viability of such innovative approaches as regional service centers or mobile facilities.

The research strategy comprises three major subsections. In the first year, the spatial demand for transportation, as derived from the demand for services themselves, was studied. Secondly, alternate systems of supply are being generated. Thirdly, an evaluatory capability for determining the viability and relative efficiency of alternative supply systems will be developed using cost-benefit and spatial-allocation models. Throughout the study, a variety of disciplines are involved.

The Influence on the Rural Environment of Inter-Urban Transportation Systems

It is essential to develop skill in evaluating and perhaps influencing the potential for growth and development of rural communities to generate new vitality. This vitality is essential if the flow of residents from rural to urban America is to be checked or reversed.

This research is directed at developing a quantitative model capable of expressing a rural community's potential for growth and development as influenced by the connectiveness of the community to inter-urban transportation systems.

Using selected communities in Eastern Texas and locally available sources of data, a predictive model relating the variables in three descriptive

models will be formed. This model will provide the information necessary to reasonably anticipate the direction of future growth and development.

The second year's research is focusing on formulation of a preliminary hypothesis describing how and to what extent changes in the social and political characteristics of a community may interact with changes in transportation to alter and direct a rural community's opportunity for growth and development.

Intermodal Freight Transportation in the Southwest

The purpose of this topic is to determine ways in which intermodal freight transportation in the Southwest can be improved. During the first year the study focused on the Dallas-Fort Worth Economic Area, designated by the U.S. Office of Business Economics consisting of 24 counties in Texas and two in Oklahoma. In the second year the study is being expanded to include Arkansas, Louisiana, Oklahoma, and Texas, designated as the West South Central states by the U.S. Bureau of Census. In addition to this effort, legal research is being undertaken on three aspects of air and rail transportation in Texas. Specific recommendations have been published regarding improved freight transportation and modernized rail lines. Further work along these directions is in process.

Monitoring the Effects of the Dallas-Fort Worth Regional Airport

The major goal of this research topic is the development of a detailed plan for monitoring the impacts of a major new transportation facility, the Dallas-Fort Worth Regional Airport. Two types of impacts are of particular interest in this research: (1) impacts on the growth of the Dallas-Fort Worth SMSA, and (2) impacts of the new airport on the transportation patterns in the Dallas-Fort Worth Economic Area and in the Southwest.

The first task has two major goals:

- (1) to develop measurement techniques to isolate a few key variables describing the effects of airport investment on the SMSA, and to analyze the inter-relationships between the variables over space and time; and
- (2) to develop models of the kinds of conflict which arise between governmental agencies, large corporate industries and residential property owners over the development of land in the vicinity of the

airport, together with models of the decision processes whereby such conflicts are resolved and generate urban growth and change.

The second task is concerned with developing preliminary models for estimating changes in the ground transportation patterns. These models will be made more sophisticated by including:

- changes in ground modal split caused by the new airport location and the availability of new transit facilities such as surtran and or U-TACV,
- (2) shifts in mode choice between air and ground modes for regional intercity transportation caused by the new airport locations,
- (3) changes in trip generations due to changes in the numbers and types of airline flight schedules available, and
- (4) changes in trip distribution resulting from land-use changes as studied in Task 1 of this research topic.

Evaluation of Riding Quality Factors in Multimodal Systems

A great deal of information is needed by way of evaluation to determine what the transportation user likes or dislikes about a particular ride or a particular mode of transport. A two-pronged attack on this problem is proposed.

Improvement of the transportation facilities is necessary for the continued development of any region. A stated goal of the Texas State and Regional Planning Boards is to "develop a balanced transportation systems for the regions by combining various modes of travel and technologies for the maximum convenience and efficiency and minimum confusion and congestion in the movement of people and goods."

Movement of people assumes a system to provide safety and convenience with reasonable comfort. In an area such as the Southwest, major centers separated by distances of 200 miles or so are frequent and travel times with new modes of ground transportation of two hours and more may be expected. A high-quality ride for that time duration is essential if popular use of any system is to be maintained.

The major objectives of the work described are to analyze existing ride quality criteria in use for all modes, to seek a common basis, and to determine if and to what extent a common set of criteria can be used for the dual purposes of guideway and vehicle design. These criteria are to be evaluated in relation to the human attitude responses about ride quality. The common set will then be used in stidues of T.A.C.V. and lower speed pneumatic tire vehicle systems so that design criteria may be established for

- (1) pavement or guiding surfaces,
- (2) controlled suspension and steering subsystems, and
- (3) overall system controls.

Human Response in the Evaluation of Modal Choice Decisions

Based on an evaluation of existing modes, using key determinant procedures, several types of work will be undertaken.

- (1) Recommendations will be proposed to Austin Transit for implementation into the system.
- (2) Further refinement of the measures, key determinant attributes, found during the first year of study will be made: with special attention given those attributes which local authorities are interested in acting upon.
- (3) Longitudinal studies of changes in attributes toward determinant attributes, transit funding, etc. will be undertaken. Such studies will include an extension of the first year's work to the study of AMTRAK in Texas and the Southwest.
- (4) Various analytical procedures (e.g., factor analysis, regression analysis, etc.) will be used to investigate changes in attributes of transportation modes and promotional messages to effect rider and voter responses.

OTHER PROJECTS

Project: A Study of Low-Cost Forest Service Roads

Co-Principal Investigators: W. R. Hudson, C.E., B.F. McCullough, C.E.

Research Assistant: Tom McGarragh

Sponsor: U.S. Forest Service

Completion: August 1974

Funding: \$19,600 A two year extension totaling \$50,000 is under negotation at this time.

The National Forest Service maintains over 200,000 miles of roads throughout the United States. These low volume roads--ranging from narrow, unsurfaced roads to two lane asphalt concrete, paved roads--serve as access roads to recreational and timber land areas. In addition to these, another 136,000 miles of Forest Service roads are planned for construction in future years. Because of the difficulty involved in efficiently designing and maintaining road pavements in such an extensive system, the National Forest Service is sponsoring a research project with the objective of developing and implementing a working pavement design and management system for lowcost roads, in particular Forest Service roads.

The first year of this project was devoted to the formulation of a preliminary conceptual system. To do this it was necessary to study the parameters and constraints involved in the problem. Therefore, a comprehensive literature review to gather necessary background material was initiated and is now complete. In addition to this literature review, extensive interaction between Forest Service personnel and the project staff has been required, in the form of field visits and project conferences to discuss some of the many complexities of the problem. With the synthesis of information the preliminary conceptual system will be developed.

If, after its presentation, this conceptual system is accepted by the Forest Service there will be an opportunity to renew the program with Phase 2 of the project - the development of the actual pavement design and management system, including mathematical models and other information that is needed for optimization. This will then be followed by Phase 3 the preparation of training materials and implementation of the design and management system

on a trial basis in a selected Forest Service management area. Negotiations are now under way.

Project: <u>Vehicle Noise Studies</u> Senior Principal Investigator: Elmer Hixson, E.E. Principal Investigator: Doug Reynolds Sponsor: Department of Transportation Proposed Completion: December 1974 Funding: \$41,830 for 18 months

A new method of vehicle noise measurement that compensates for microphonevehicle distance and gives source directivity is being used to isolate noise sources and modes of radiation. This information will be used for developing noise reduction techniques. To determine a better human response model, temporal and statistical properties of vehicle generated noise will be used in addition to the traditional weighted averaged sound pressure levels.

A goal of the subjective reactions study is to develop a responsebased model which will allow the determination of an optimal acoustical environment. Field data will be collected to determine the predictive contribution of several engineering indices to the response-based classification model. Thus, the overall product of the study will be a measurement system able to precisely describe both the physical characteristics of transportation noises and subjective psychological reactions to them as well. To do this semantic differential techniques will be employed in order to develop a classification model of subjective responses to transportation noise. Then the signal parameters which affect subjective responses to the noise will be investigated in laboratory settings. Finally, the relative utility of several acoustical measurement techniques as predictors of the subjective classification model will be determined in field settings.

Project: Analysis of Effectiveness of Transportation Alternatives

Co-Principal Investigators: Sandra Rosenbloom, Community and Regional Planning Sponsor: Council for Advanced Transportation Studies Completion: Fall 1974

Funding: \$2,650

In January 1974, at the request of The University ad hoc Energy Conservation Committee, the Graduate Program in Community and Regional Planning undertook a survey of the full-time faculty and staff of The University to determine their interest in both carpooling and bus alternatives to their usual mode of home-to-work travel. Over 65% of the slightly under 10,000 persons surveyed returned completed questionnaires. A special program was written to collect and analyze these data. Three separate carpooling matching routines were run for the University community

The research is focussed on two problems (1) evaluation of the effectiveness of the carpool matching service, and (2) an analysis of the need for special bus services. The first part is essentially a concern for short-term immediate improvements directly attributable to the matching of interested carpoolers. This study has a three-part design: (1) a "before-and-after" survey of vehicle occupancy and traffic congestion in the immediate University location, (2) a sample survey of those who indicated carpool interest to determine what actually happened to their usual travel patterns, and (3) an investigation of the personal and social constraints inhibiting the use of alternative transportation modes for University personnel.

The second major part of this topic involves a detailed analysis of the questionnaire responses indicating interest in special bus services. Several bus options are being investigated, using the survey data to set the parameters for a project the effectiveness of, proposed systems such as demandactivated transit, subscription home-to-work services, and new bus routing.

Project: <u>A Plausible Scenario for the Development of a Comprehensive</u> <u>Transportation System Using the Austin-Travis County Area As An</u> <u>Illustrative Case</u>

Co-Principal Investigators: Robert Mather, Architecture Sponsor: Council for Advanced Transportation Studies Completion: Fall 1974

Funding: \$2,160

Since 1971, the P.I. has been developing an economical and comprehensive methodology for understanding the future implications of planning and technological decisions being made or considered in the present. This work has postulated, in a quantitative and qualitative sense, the performance of the total environment of Austin-Travis County in the mid 21st century. Working backward from this 21st century environment, the P.I. produced a plausible scenario of development involving both the public and private sector of the economy.

This topic is paraphrasing this material into transportation system terms and then pushes this aspect of the project to yield a chart which displays for the next seventy-five years (more or less) a plausible development sequence for an Austin-Travis County transportation system. The particular focus in this effort is on two facets: (1) human problems and the role of transportation in solving them, and (2) the influence on the environment of both physical and operational changes in transportation. Topics I, II, and V of the main DORT project are providing inputs into this research effot.

Project: <u>Transportation Services for the Mentally Retarded</u>
Co-Principal Investigators: C. Shane Davies, Geography, and John Carley, Austin State School
Sponsor: Council for Advanced Transportation Studies
Completion: Fall 1974
Funding: \$1,500

Within the past three years, the traditional concept of habitation for the

mentally retarded has been seriously challenged, if not replaced, by the principle of normalization. In implementing the principle of normalization, representatives from the Texas Department of Mental Health and Mental Retardation in cooperation with parents and representatives from all agencies serving the mentally retarded in Travis County, conducted a survey to determine the services required to meet the needs of the mentally retarded. This committee, as a result of this effort, endorsed transportation as the priority service due to its interrelatedness with all other proposed and existing services.

This topic is concerned with the examination of the factors that influence transportation within the context of normalization as it relates to the mentally retarded in Travis County. The mentally retarded referred to in this topic are categorized as those individuals who demonstrate a potential for community living.

Therefore, the intent of this research project is to provide: (1) a detailed delineation of the problems created by the present transportation system, (2) an in-depth literature review to obtain a global frame of reference to the problem, (3) a training curriculum in transportation, and (4) to implement specific recommendations so that the lives of the retarded will no longer be defined by a transportation system.

Project: <u>Gasoline Retailers' Right to Survival</u> Co-Principal Investigators: James M. Treece, Law Sponsor: Council for Advanced Transportation Studies Completion: Fall 1974 Funding: \$2,000

The production and transportation to refineries of a scarce resource, petroleum, can be regulated and its refinement controlled by a small number of interdependent firms and regulatory agencies. On the other hand, the task of distributing the end product to consumers, with its attendant risks and small profit margins, can be shifted to small businesses who invest in the property,

equipment, and personnel needed for the retail function.

The law of franchising permits refiners to induce independent business-persons to invest in the retail outlets without at the same time quaranteeing them the freedom of decision about products, prices, and services. Refiners require, and the law permits them to require, heavy dependence from their "independent" co-enterprisers. But when times change, refiners willingly seize upon the label "independent" to terminate trade relationships with their licenses.

This project focuses on the literature of economics and the literature of law to: (1) discover the economic justification for eliminating inefficient competition in the retailing of the produce of regulated raw material suppliers and monopolistically competitive refiners, and (2) discover the legal justification for manipulating legal concepts to impede, for non-economic reasons, the dismantling of an inefficiently competitive retail distribution system.

Project: Energy Crisis and Its Effect on Texas' Highway Accident Experience Co-Principal Investigators: Edward Frome, Statistics-Operations Research and C. Michael Walton, Civil Engineering Sponsor: Council for Advanced Transportation Studies Completion: Fall 1974

Funding: \$2,850

There is wide acceptance that the energy crisis, which led to the maximum legal speed of 55 miles per hour on Texas Highways, has had a significant effect on accident experience. In fact, statements have been made that the number of accidents and fatalities have been greatly reduced.

This topic is investigating the severity of accidents on rural Texas Highways "before" and "after" the change in legal speed limits. Highway accidents are being classified as fatal, injury, or property damage only accidents. The study is investigating the change in accident severity and types that occurred on specific highway classes, i.e., interstate, primary secondary, and state system. A regression model is being used for this analysis. However, the usual regression techniques are being modified under the assumption that accidents are poisson-distributed, with the expected value defined by the regression model.

In addition to the above topics, another project has been funded out of the DOT monies. This topic has only received its approval from the DORT Review Committee in the last quarter of the contract year and will not become operational until September 1974. The research is preliminary and being conducted with the expectation of an expanded Element II proposal being prepared and forwarded to DOT.

Project: Where the Buses Are

Co-Principal Investigators: Dean Danielson, College of Communication, Alfred Smith, Director Center for Communications Research, and Charles Watkins, Research Associate

Sponsor: Council for Advanced Transportation Studies Completion: June 1975

Funding: \$5,000

Fuel shortages, urban congestion, and pollution increase the importance of getting the public to use mass transportation. Middle and upper class patrons of public transportation are more likely to be casual users, with an emphasis upon non-peak hour times. It has been observed in studies in Pittsburgh, that casual riders need more information about bus schedules than is normally available if they are to use this form of public transportation.

The focus of this topic is to increase the patronage of casual, non-peak hour, middle class riders of buses. The overall study is divided into four phases. Only the first phase is being developed now. This is essentially a feasibility study designed to test various forms of visual displays on cable television. A series of questions are being investigated before subsequent phases are proposed and developed as an Element II project. These questions include: (1) should the information on where the buses are be displayed next to the time and temperature information on cable television or on

some separate channel?; (2) If the schedule display is presented with time and temperatures, should it appear at the end of the scan or in the middle?; (3) Which kinds of displays are most effective with middle and upper class patrons?; and so on. This task is closely coordinated with Topic V of the major project.

In addition to this topic, other proposals will be considered for possible development as Element II submissions.

SUPPORT AVAILABLE FOR 1973-1974 RESEARCH IN TRANSPORTATION

The Division of Research received administrative support from The University for the 1973-74 fiscal year budgeted at \$25,000. The primary research support for this fiscal year was the renewal of the large DOT contract entitled "Transportation to Fulfill Human Needs in the Rural/Urban Environment", May 1, 1974 to April 30, 1975 for \$375,000. The contract for Vehicle Noise Studies, contracted in early 1973, received a no-cost extension. The U.S. Forest Service, contracted in June 1973, also received a no-cost extension.

The DOT contract calls for University cost-sharing of \$79,500. A significant amount of the University's cost-sharing is derived from faculty contributed time, computer time, and graduate students on fellowships contributed time. In addition, the DOT contract calls \$65,000 in cost-sharing with Government and Industry. Again, these shared costs are primarily in terms of contributed personnel time and information inputs, and donated consultative services. All of these financial inputs bring the total DOT contract to \$519,500.

Two interagency contracts were also developed this fiscal year. One with the Governor's Office for "Formula for the Allocation of State Funds to Local School Districts for Student Transportation". This contract was in the amount of \$2,245, and was performed in conjunction with Topic I of the DOT contract. The second contract was with the Austin State School for the Mentally Retarded for \$2190. This work was performed in conjunction with Topic V of the DOT Contract.

In addition to these external monies for research, the University has contributed approximately \$11,000 directly to the support of five small (miniproposals) research projects. These projects, discussed in greater detail elsewhere in the Report, represent a wide range of topics and disciplines. The five proposals supported were selected, by a review committee, from a total of 14 proposals, with a total value of \$29,143.

RESEARCH REPORTS

RR 1 Briggs, Ronald, Wayne T. Enders, James A. Fitzsimmons and Paul Jensen, <u>Access to Essential Services: Analyzing the Existing System</u>, April 1974. (DOT-OS-30093 I-1)

This report is a compilation of first year results from a three year research effort entitled, "Access to Essential Services in the Rural/Urban Environment." This report covers problem areas in service availability, a literature overview, the existing system, demand modeling, and data systems.

RR 2 Skorpa, Lidvard, Richard Dodge, C. Michael Walton and John Huddleston, <u>Transportation Impact Research: A Review of Previous Studies and a</u> <u>Recommended Methodology for the Study of Rural Communities</u>, March 1974. (DOT-OS-30093 II-1)

> In this report the authors briefly define and classify methodologies used in transportation impact studies, summarize in detail previous research findings according to type of impact investigated, comment on usefulness and limitations of previous studies and propose strategy for future research.

RR 3 Skorpa, Lidvard, Richard Dodge and Michael Walton, <u>Land Value</u> Modeling in Rural <u>Communities</u>, June 1974. (DOT-OS-30093 II-2)

> This report develops indices for transportation and community related factors to be used in regression analysis with land value as the dependent variable. The techniques developed are applied to data from Sealy, Texas. It discusses why land values can be used as an indicator of community impact and evaluates a technique for modeling land values in a small town.

RR 4 Robinson, Eugene, <u>An Inventory of Freight Transportation in the</u> <u>Southwest Part I: Major Users of Transportation in the Dallas-</u> <u>Fort Worth Area</u>, December 1973. (DOT-OS-30093 III-1)

> The author measures efficiency of the freight transportation system of the Dallas-Fort Worth areas as to how adequately natural and contrived fluctuations in demand over time are met.

RR 5 Adair, J. Bryan and James S. Wilson, <u>An Inventory of Freight Trans-</u> portation in the Southwest Part II: <u>Motor Common Carrier Service</u> in the Dallas-Forth Worth Area, December 1973. (DOT-OS-30093 III-2)

> This report discusses the development of motor freight service in the Dallas-Fort Worth area; inventories common carriers of general freight and specialized truck carrier operations.

RR 6 Adair, J. Bryan, <u>An Inventory of Freight Transportation in the</u> Southwest Part III: Air Freight Service in the Dallas-Fort Worth <u>Area</u>, June 1974. (DOT-OS-30093 III-3)

> This report focuses on the Dallas-Fort Worth area, a Texas distribution and collection center for freight. During the past ten years air cargo volumes have increased more than would be expected on the basis of population growth alone. This report, along with the previous two in the set will lead to recommendations for improving freight transportation in the Southwest.

RR 7 Chipman, William D., Harry Wolfe, and Pat Burnett, <u>Political Decision</u> <u>Processes, Transportation Investment and Changes in Urban Land Use:</u> <u>A Selective Bibliography With Particular Reference to Airports and</u> Highways, March 1974. (DOT-OS-30093 IIIB-2)

> This bibliography deals with revision and extension of intraurban location theory explaining how groups and individuals affect change in intra-urban land use in the vicinity of new transportation facilities. Special attention is focused on new airports in rural/ urban fringes.

RR 8 Wolfe, Harry, <u>A Preliminary Analysis of the Effects of the Dallas-</u> Fort Worth Regional Airport on Surface Transportation and Land Use, April 1974. (DOT-OS-30093 IIIB-3)

> This report describes some preliminary effects of the Dallas-Fort Worth Regional Airport on the transportation and land use systems of Denton, Dallas and Tarrant counties in Texas. The first part examines the effect of the airport on the highway network and public transportation. The second deals with the airport's impact on industrial, commercial and residential development.

RR 9 Burd, Gene, <u>Dissemination of Information to Increase Use of Austin</u> Mass Transit: A Preliminary Study, October 1973.

> The relationship of information to mass transit usage in Austin, Texas is the focus of this report. Air pollution and the energy crisis brought buses into the limelight since Austin is primarily an automobile city. Effects of media coverage, public education, special transit services on bus ridership are discussed, and recommendations made on ways to improve bus service in Austin.

RR 10 Rosenbloom, Sandra, <u>Study and Analyze the Potential Forms of Innovative</u> <u>Taxi/Jitney Service as a Means of Improving the Efficiency of the</u> Total Transportation System, September 1973.

> This paper tries to bring new insights and perspectives into focus which develop innovative ideas for taxi/jitney service as a means of improving the efficiency of the total transportation system mainly concentrating on ideas which apply to low density medium sized metropolitan areas.

RR 11 Rosenbloom, Sandra, and Nancy Shelton Bauer, <u>Carpool and Bus Matching</u> Programs for the University of Texas at Austin, September 1974.

> This paper describes a study done for the President's ad hoc Energy Conservation Committee which provided assistance in the development of effective contingency plans and meaning for transportation alternatives for University personnel. A program was designed for the administration of a carpool and bus matching survey and program and the results are presented in this paper.

RR 12 Hudson, W. R., and Thomas G. McGarragh, <u>A Pavement Design and</u> <u>Management System for Forest Service Roads A Conceptual Study</u>, July 1974.

> This paper is the final report for Phase I of a projected threephase study being conducted for the Forest Service by the Council for Advanced Transportation Studies. The purpose of the project is to develop and implement a pavement design and management system for low-volume roads, in particular, Forest Service Roads.

RESEARCH MEMORANDA

RM 1 Davies, C. Shane, Mark Alpert, and W. Ronald Hudson, <u>Human Response</u> in the Evaluation of Modal Choice Decisions, April 1973.

> This memo describes proposed research which will attempt to evaluate existing modes of transportation mixes available for urban/rural travel in terms of current user/non-user perceptions for each mode.

RM 2 Briggs, Ronald, Charlotte Clarke, James Fitzsimmons, and Paul Jensen, <u>Access to Essential Services</u>, April 1973.

This memo describes proposed research concerned with the contribution transportation systems can make to the provision of essential services in rural areas.

RM 3 Wooldridge, D. W., A. J. Healey, and R. O. Stearman, <u>Psychological</u> and <u>Physiological Responses to Stimulation</u>, August 1973.

> A major impediment in the design of transportation systems is the opinion that the passenger has about his ride comfort. This Research Memo discusses the passenger's neurological response to stimulation.

RM 4 Zlatkovich, Charles P., <u>An Intermodal Transportation System for the</u> Southwest: A Preliminary Proposal, September 1973.

This research memorandum presents a concept involving use of highway transportation for local pickup and delivery of freight integrated with rail transportation for the heavy line-haul movements.

RM 5 Davies, Shane, Mark Alpert, Harry Wolfe, and Rebecca Gonzalez, <u>Pas</u>senger Travel Patterns and Mode Selection, October 1973.

> This research memorandum assesses on a limited scale the present patterns of modal travel choice available to passengers in Texas as a preliminary step for structuring a balanced transportation network.

RM 6 Davies, Shane and Mark Alpert, <u>Segmenting a Transportation Market by</u> Determinant Attributes of Modal Choice, October 1973.

> This research memorandum discusses the background rationale for designing transportation systems to suit user's needs. It also describes the methodology being used to assess these needs in the survey area, and relate them to characteristics and attitudes of key public groups.

RM 7 Zlatkovich, Charles P., <u>The Interstate Rail System: A Proposal</u>, December 1973.

> This memo describes the possible development of a nationwide network of modernized rail lines somewhat similar to the Interstate Highway System.

RM 8 Shanahan, Bruce, Ronald Stearman, and Anthony Healey, <u>Literature</u> <u>Survey on Passenger and Seat Modeling for the Evaluation of Ride</u> <u>Quality</u>, November 1973.

> A brief discussion of the various inputs that affect ride quality and the need for ride quality criteria is given.

RM 9 Briggs, Ronald and James Fitzsimmons, <u>The Definition of Essential</u> Services and the Identification of Key Problem Areas, January 1974.

> This research memo provides a conceptual basis for defining accessibility problems of the rural population with respect to goods and services and delimits subsets from the total which might be termed essential. Differences in usage and supply system characteristics between functional and dysfunctional population are presented as accounting for present problems in the availability of certain types of goods and services.

RM 10 Adair, J. Bryan, <u>A Procedure for Calculating Great Circle Distances</u> Between Geographic Locations, March 1974.

> This memo describes a computer program and associated procedures presenting a relatively simple means for figuring great circle distances between points for which geographic coordinates are known.

RM 11 Hunter, Graham, Richard Dodge and C. Michael Walton, <u>MAPRINT: A</u> <u>Computer Program for Analyzing Changing Locations of Non-Residential</u> <u>Activites</u>, March 1974.

> This memorandum describes an analytical tool developed as part of the larger research effort entitled, "The Influence on the Rural Environment of Interurban Transportation Systems" to reflect changing spatial relationships between all non-residential activity and the transportation systems upon which they depend.

RM 12 Matthews, Ronald T., <u>911 Emergency Telephone Number System - A Pro-</u> posal for the Capital Area Planning Council, June 1974.

This is a case study approach to ascertain some of the additional problems involved in implementing the 911 emergency services telephone number system for a rural area as opposed to an urban area.

RM 13 Means, Robert C. and Barry A. Chasnoff, <u>State Regulation of Air</u> Transportation in Texas, April 1974.

> The subject of this research memorandum is concerned with aeronautics regulation by a state commission as a third alternative to regulation by a Civil Aeronautics Board and freedom from regulatory controls. This is a preliminary study of this third alternative as it developed in Texas.

RM 14 Zlatkovich, Charles P., S. Michael Dildine, Eugene Robinson, James S. Wilson and J. Bryan Adair, <u>Transportation Atlas of the Southwest</u>, June 1974.

> This publication provides information on the existing transportation system of the Southwest through the use of maps, charts and tables. The atlas was prepared as part of an inventory and evaluation of transportation facilities, services and practices in the Southwest to be used in developing recommendations for the improvement of freight transportation.

RM 15 Chipman, W. D., Local Governmental Decisions and Land-Use Change: An Introductory Bibliography, May 1974.

This bibliography is an attempt to begin the research leading to a viable theory of the interaction between governmental decision making and locational choice in order to better understand the process of land use change.

RM 16 Dildine, Michael, <u>An Analysis of the Truck Inventory and Use Survey</u> Data for the West South Central States, July 1974.

> A comparison of data drawn from the 1972 Census of Transportation Report for Texas, Lousiana, Oklahoma and Arkansas as to truck ownership and use.

RM 17 Dunlay, William J., and Lyndon Henry, <u>Towards Estimating the Impact</u> of the Dallas-Fort Worth Regional Airport on Ground Transportation Patterns, September 1974.

> This project is a policy oriented study of the impact of the Dallas-Fort Worth Regional Airport on ground transportation in the Dallas-Fort Worth Area. The focus of the study is to isolate changes in ground transportation patterns that can be attributed to the new regional airport. This research is directed toward producing results and developing a methodology that can be applied to evaluating the impact of other major new regional airports.

RELATED JOURNAL ARTICLES AND PAPERS

 Burnett, P., "Disaggregate Behavioral Modes of Travel Decisions Other Than Mode Choice: A Review and Contribution to Spatial Choice Theory," in P. Stopher and A. Meyburg, (eds.) Issues in Behavioral Demand Modeling and the Valuation of Time, Washington, D. C., Transportation Research Board, forthcoming. Also in P. Stopher and A. Meyburg, (eds. Issues in Behavioral Demand Modeling and the Valuation of Time, Final Report 70, U. S. Department of Transportation, Federal Highway Administration, November 1973, Vol 2, pp. 189-205.

This paper attempts to extend work on disaggregate behavioral modeling of traveling decisions by a collation and review of literature of intra-urban travel decisions other than mode choice, with applications in trip generation, distribution and route assignment. This paper also attempts to focus attention on salient features of spatial choice models and outlines research problems and strategy.

 Burnett, Pat, "A Bernoulli Model of Destination Choice," accepted for publication at the Highway Research Board Meeting, January 21-24, 1974, Washington, D. C.

This paper explores an alternative approach to the complexity of destination and the difficulty of developing a single model of a heterogeneous population group. A simple Bernoulli model is developed to describe this process.

3. Hudson, W. R., and C. Michael Walton, "Transportation to Fulfill Human Needs in the Rural/Urban Environment," presented to the 1974 Automotive Engineering Congress and Exposition, Society of Automotive Engineers, February 27, 1974.

This paper presents background and initial funding on a multidisciplinary program sponsored by the U. S. Department of Transportation, University Research Program. The program has two major thrusts: (1) human factors and needs must be considered in planning, developing, and constructing transportation systems; and (2) transportation can help to preserve, restore, and reinforce any symbiotic relationship and balance that may exist between rural and urban life.

4. Walton, C. Michael, and W. R. Hudson, "Transportation Education: A Multidisciplinary Approach," presented to Ohio State University, 1974.

This paper describes the multidisciplinary transportation programs at The University of Texas with particular attention to the involvement of the Department of Civil Engineering

5. Bolding, R., T. Healey, and R. Stearman, "Measurement of Roadway Roughness and Motion Spectra for the Automobile Highway System," May 1974.

This paper was designed to support an overall program for the evaluation and establishment of ride quality criteria in transportation systems. The investigation covers measurements, recordings, and analysis of automobile vibrations and highway or roadway roughness using various areas in Texas. Enders, Wayne T., Patricia M. Poston, and Ronald Briggs, "Access to Essential Services in Rural/Urban Environment: A Selected Interdisciplinary Bibliography," Council for Planning Librarians, Exchange Bibliography, June 1974.

The main purpose of the literature search was to create a basis from which sound recommendation could be offered for improving the accessibility of essential services to residents of rural areas. The search focused on improving access to the more immediate human needs related to physical, social, and psychological health.

 Burnett, P., William D. Chipman and Harry P. Wolfe, "Political Decision Processes, Transportation Investment and Changes in Urban Land Use: A Selective Bibliography with particular Reference to Airports and Highways," Council of Planning Librarians, Exchange Bibliography, August 1974.

This bibliography assists with revision and extension of intra-urban location theory explaining how groups and individuals affect change in intra-urban land use in the vicinity of new transportation facilities. Special attention is focused on new airports on rural/urban fringes.

 Alpert, Mark I., and C. Shane Davies, "Segmentation of a Transportation Market by Determinant Attitudes," presented to the American Psychological Association Convention, New Orleans, Louisiana, September 2, 1974.

The objectives of this research were to develop a method for identifying the transportation features or attributes that determine modal choices for specified trip purposes; to estimate the percentage of people now using private cars who would be quite likely to switch to a public transportation system if it were improved to suit their needs; to evaluate the attributes of existing low-density modes and high-density transportation modes; to indicate appropriate promotional messages to appeal to these potential riders; and to survey both the general adult community and a designated "leaders" group for their attitudes towards public transportation.

9. Alpert, Mark I. and C. Shane Davies, "A Decision Sciences Approach to the Marketing of Public Transportation," to be presented at the meeting of the American Institute for Decision Sciences and published in the Journal of the American Institute for Decision Sciences, Fall 1974.

This paper discusses a stratified random sample of adults surveyed concerning numerous attitudes and characteristics useful in designing and marketing public transportation. 10. Healey, A. J., R. O. Stearman and C. C. Smith, "Automobile Riding Quality with Real Highway Roughness," Invited paper, American Institute of Aeronautics and Astronautics Life Sciences and Systems Specialist Conference, Dallas-Fort Worth, Texas, November 13-15, 1974, to be published in proceedings.

This paper describes vehicle modeling and random acceleration response prediction work of a broad transportation research topic. The research topic deals with the evaluation of riding quality through correlation between subjective feeling responses of a rating panel with objective measures of the vehicle accelerations.

 Davies, Shane, and Mark I. Alpert, "Modal Choice Models: Introduction and Selected Bibliography," Council for Planning Librarians, Exchange Bibliography, November 1974.

This research is related to an understanding of how people choose their mode of transportation in cities. Modal split models are utilized because they are characterized by pre-distribution models.

12. Burnett, P., "Decision Processes and Innovations: A Transportation Example," Economic Geography, forthcoming.

This paper attempts to develop a methodology for addressing further in spatial and temporal properties of innovation diffusion, with particular attention to the diffusion of new kinds of links for transportation networks (e.g., highways).

GRADUATE THESES AND DISSERTATIONS

1. McGarragh, Thomas G., <u>A Pavement Design and Management System for Forest</u> Service Roads A Conceptual Study, July 1974. (MS)

This thesis describes Phase I of a projected three-phase study being conducted for the Forest Service. The purpose of the project is to develop and implement a pavement design and management system for low-volume roads, in particular, Forest Service Roads.

 Zaniewski, John P., <u>Airport Capacity Analysis A Systems Approach</u>, July 1974. (MS)

This thesis describes existing quantitative models for analysis of the capacity of various components of the airport system. Procedures for utilizing these models are also discussed. Recommendations are made concerning possible modifications of existing models, and priorities for these modifications are assigned according to the necessity for improvement.

3. Matthews, Ronald T., <u>911 Emergency Telephone Number System--A Proposal</u> for the Capital Area Planning Council, June 1974. (MS)

The purpose of this thesis is to provide CAPCO planners and governmental officials with a better understanding of 911 systems, indicating a framework for detailed future studies and offering a proposal for a system that would effectively serve CAPCO's 450,000 residents. The report contains a 911 system that is potentially most beneficial for a predominantly urban environment.

- 4. Shanahan, Bruce Gene, <u>The Attainment of Riding Comfort for a Tracked</u> <u>Air-Cushion Vehicle Through the Use of An Active Aerodynamic Suspension</u>, September 1974. (MS)
- 5. Skorpa, Lidvard, <u>A Modeling Technique of Land Values in a Rural Community:</u> <u>A Case Study</u>, August 1974. (MS)

This thesis concentrates on the impact of land values. It discusses why land values can be used as an indicator of community impact and evaluates a technique for modeling land values in a rural community. The technique is used in a case study of Sealy, Texas.

WORKING PAPERS AND REPRINTS

1. Doughty, Robin, <u>Bird Hazards to Aircraft:</u> <u>Competition for Space</u>, November 1973.

> This paper describes the characteristics of bird collisions with aircraft. Attitudes toward birds have changed from affection to hostility since damage from birds can be costly to equipment and endanger human and animal life. Current attempts to minimize these dangers and the outlook for air space are also discussed in the report.

PATENT

NOISE SOURCE LEVEL DETECTION

ABSTRACT OF THE DISCLOSURE

The method of measuring the noise emanating from a noisy vehicle in a manner that reduces the measured quantity to a unit value, and hence, independent of any specific distance of vehicle-to-sound detector. The method uses a sound pressure level detector and a range measuring device, such as a radar (the output of the range devide continuously compensating the sound pressure level detected for distance) to thereby produce a quantity defined as the noise source level.

Application No. 336,051 Filed February 26, 1973 Granted May 1974 Elmer L. Hixson

RESEARCH DEVELOPMENT AND PROPOSALS PENDING

The Council for Advanced Transportation Studies regularly monitors information sources to determine potential state or national sponsors for transportation research.

The Council has worked during the past year to identify sponsors for transportation research interests of the University community. During the year we have catalogued over fifty responses to potential transportation research interests of faculty and circulated approximately twenty-five requests for proposals. Of these requests the following research proposals were submitted through the Council to the sponsoring agency.

Energy/transportation/environment policy questions with emphasis on the rural/urban environment - Department of Transportation

Analysis of innovative forms of taxi/jitney service for improvement of the transportation system - Transportation Systems Center

Transportation problems of a depressed, primarily agricultural, economic region - Council for South Texas Economic Progress

Improving the management of an on-going interdisciplinary research program - National Science Foundation

The following research proposals are in preparation for submission in the fall of 1974.

- A pavement design and management system for forest service roads -Forest Service
- Environmental and energy impact assessment of railroad electrification-Department of Transportation
- Transportation system design for offshore supertanker terminals -Department of Transportation
- Ride quality studies on ground-based transportation systems Department of Transportation
- A systems analysis procedure for estimating the capacity of an airport -Department of Transportation

In response to information disseminated by the Council, the following proposals are being submitted in 1974 by other Departments of the University of Texas at Austin.

- Theoretical and Experimental Modeling of Airport Approach and Landing Problems - Electrical Engineering Department - Department of Transportation
- Radial Freeways and the Growth of Office Space in Central Cities -Bureau of Business Research - Federal Highway Administration

The Relationship of Transportation Facilities to the Provision of Social and Economic Services in Rural Areas - School of Architecture - Community and Regional Planning - Department of Transportation

The following research topics are proposals submitted and not funded in FY 1973 but will potentially be resubmitted to other sources in FY 1974.

Use of waste materials in the construction of transportation facilities, Optimum use of natural resources in design and construction of transportation systems,

A transportation system for a major city/university/capitol metroplex, Educational aspects of use and effectiveness of public transit systems, Interior design concepts related to transportation vehicles and terminals.

The Council will also submit a joint proposal in the coming year, with the Center for Energy Studies, on Urban Mode Shifts.

MANAGEMENT OF THE RESEARCH PROGRAM

Sponsors often express concern that appropriate management be provided for multidisciplinary activities. We agree that there is little chance for success of a program if management is ineffective. However, if the program is structured too tightly, the persons from each discipline may lose their identity and their tie to expertise in their own area.

A workable structure has been developed at The University of Texas at Austin in the Council for Advanced Transportation Studies. The Council, headed by Dr. L. C. Reese, reports directly to the Executive Vice-President of The University. The Council is governed by an Executive Committee of Deans as follows:

Dr. Lymon C. Reese, Chairman, Dean Charles M. Burnett, Architecture, Dean Wayne Danielson, Communications, Dean Paul Olum, Natural Sciences, Dean Earnest F. Gloyna, Engineering, Acting Dean, Alexander Clark, Lyndon B. Johnson School of Public Affairs, Dean Page Keeton, Law, Dean George Kozmetsky, Business Administration Dean J. W. McKie, Social and Behavioral Sciences, Dean James R. Roach, General and Comparative Studies, Dean Stanley Werbow, Humanities, and Dr. W. R. Hudson, Director, Division of Research in Transportation

Research management is handled through the Division of Research of the Council. Thus, accomplishments of a faculty member in any discipline are quickly recognized by his Dean as a member of the Executive Committee and this information, along with the man's teaching and departmental research activities, can be used to justify directly promotions, raises, and other rewards. Therefore, CATS not only provides coordinated control for the research program, but also a close tie for each active researcher to his own Department and Dean.

A Budget Advisory Committee has been appointed by the President of The University to set overall policy for the Division of Research, to advise the Director of Research and the research group on their activities as needed and to assist the CATS Executive Council coordinating these activities

with all phases of The University, as required by the multidisciplinary nature of the work. The committee members are:

- Dr. Stanley Arbingast, Bureau of Business Research,
- Mr. George R. Blitch, Office of Research Management,
- Dr. C. Shane Davies, Geography,
- Dr. W. R. Hudson, Chairman, and
- Mr. Hudson Matlock, Civil Engineering.
- Dr. L. C. Reese, ex officio
- Mr. R. Dodge, ex officio

COOPERATIVE INTERACTION AND IMPLEMENTATION WITH GOVERNMENT, INDUSTRY AND EDUCATIONAL INSTITUTIONS

The Council for Advanced Transportation Studies has established a broad base cooperation with a growing number of governmental offices, industries and other educational institutions. Two examples of the cooperative activities are: 1) Dr. C. Michael Walton, one of the DOT project principal investigators, is the CATS representative on the Governor's State Transportation Coordination Council; and 2) the joint Transportation Coordinating Committee with Texas A&M University. This latter committee, jointly established by the presidents of the two universities to improve coordination on transportation activities between the universities, has met three times during the year. The committee sponsored a one day workshop on Transportation-Energy on December 17, 1973 at Texas A&M University that was attended by over 20 faculty members of the two universities. A statewide conference on Texas'transportation/energy problems will be held in Fall 1974.

A representative list of governmental agencies, industries and educational institutions that are cooperating in our research activities is given below along with implementation activities and interaction in the form of conferences, briefings, speakers and visitors to the Council for Advanced Transportation Studies.

Continental Oil Company Engineering Foundation, Industrial Associates Program AMF Inc. Alaska Interstate Inc. Airline Pilots Association Center for Scientific Urban Planning Methods, Inc.

COOPERATING EDUCATIONAL INSTITUTIONS

Texas A&M University Huston - Tillotson College University of Texas at Arlington University of Texas at San Antonio Medical School

IMPLEMENTATION ACTIVITIES

One of the desired goals of the Council's research activities is the implementation and communication of on-going research with government, industry and other universities. Outlined below are some of the areas and levels of activity that research teams have engaged in during the past year.

Topic I: Access to Essential Services

- (1) Governor's Office. As part of the identification of the existing service supply system, an examination of school buses available in the study region was initiated. At the same time, an extensive study by the State of Texas Governor's Office of Educational Research and Planning was being undertaken on the state's role in financing education. One aspect of this study was state aid for student transportation. Recognizing a commonality of interest, a joint program culminating in an interagency contract for this area was initiated by the U.T. team and the Governor's office to examine the extent to which students are transported, the cost of bus operation, and the relationship of these factors to the characteristics of the school district. Paramount in the thinking of both the U.T. research team and the Governor's Office was the possibility of using school buses for purposes other than student transportation, particularly for providing transportation to essential services other than education.
- (2) <u>Capital Area Planning Council</u>. Drs. Ronald Briggs, James Fitzsimmons, and Carol Deets, Principal Investigators for the Topic "Access to Essential Services", are active members of the CAPCO Health Advisory Committee that is currently in the process of developing the regional health plan. Illustrative of this involvement are the following activities:
 - (a) The researchers have been identifying the structure of the system together with the parameters, the values of which have been supplied by the CAPCO residents through their Health Advisory Committee representatives. This preliminary system

structuring insures that alternative supply systems may be comparable for evaluation and that all relevant issues are considered (e.g., service area, manpower, facilities, financial sources, transportation, etc.).

- (b) with full involvement of the Health Advisory Committee, the team has been obtaining ideas as to types of systems which might be feasible for implementation in the CAPCO region. This Community involvement at the initial level of the system development and specification should insure that workable systems are being considered for further evaluation and not just some academic utopia. Such systems are also more likely to be implemented because of their acceptance by the local community through their continued involvement in their development.
- (3) (a) Mr. Ronald Matthews completed an M.B.A. thesis on a 911 Emergency telephone service for the CAPCO Region.
 - (b) Mr. Wayne Enders, a PhD candidate in Geography is currently investigating the relationship between perceived needs and travel in the CAPCO region.

Topic II: Environmental Impact of Interurban Transportation Systems on Rural Communities

Contact has been maintained with local and state governments, in particular with the Texas Highway Department concerning upcoming public hearings. Because of organizational problems within the Texas Department of Community Affairs, coordination with that state agency has been temporarily suspended.

Topic III-A: Improvement of Intermodal Freight Transportation in the Southwest

A major midwestern railroad is currently considering a plan to implement a rail-highway intermodal service similar to the system proposed in Research Memorandum entitled,"An Intermodal Transportation System for the Southwest: A Preliminary Proposal".

Topic III-B: Monitoring the Effects of the Dallas-Fort Worth Regional Airport

Some 50 major decisionmakers in government and industry in the Dallas-Fort Worth Area are being interviewed. An exchange agreement has been arranged with them to provide them copies of all project reports in return for information on their decision processes. This agreement seems to be providing useful information to these bodies, since the Dallas Chamber of Commerce wishes to publish and distribute copies of the CATS report entitled, "A Preliminary Analysis of the Effects of the Dallas-Fort Worth Regional Airport on Surface Transportation and Land Use", by Mr. Harry Wolfe, at their expense.

Preliminary analysis of the flight and passenger data suggests that feedback to agencies such as the FAA and CAB will result in improved data collection techniques.

Topic IV: Ride Quality Evaluation of Multimodal Systems

A very good interaction has continued between our project and both the Center for Highway Research and the Texas Highway Department.

Other specific interaction has occurred with the National Aeronautics and Space Administration at the Langley Research Center who have loaned us a Three-axis accelerometer and are interested in our vehicle acceleration results.

Informal discussions with L.T.V. (Ground Transportation Division) have helped them in their awareness of ride quality criteria and human response measurement techniques.

Topic V: Human Response in the Evaluation of Modal Choice Decisions

The close cooperation between this study and various state and local agencies, developed early in the program, has been maintained. This has led to the utilization of our research findings by such groups as: Amtrak Agents-Southwest, the Mayor, City, City Counselors, City Planners of Austin, Texas, and the Governor's Office, State of Texas. ASsociated with this topic, also, has been the development of an interagency contract with the Austin State School to study the travel requirements of the mentally retarded.

Other Conferences and Meetings

In addition to the meetings described above, various team members participated in several other professional conferences and meetings which were transportation related, or of some closely allied subject area. These activities are summarized below in an alphabetical listing of members involved.

Dr. Mark Alpert presented a paper on transportation research efforts at a meeting of the American Psychological Association in New Orleans, Louisiana.

Dr. John Betak attended the Environmental Design and Research Association meetings in Milwaukee. He presented two papers and met with researchers from other institutions.

Dr. Ronald Briggs attended the Association of American Geographers Conference in Seattle. He attended transportation related sessions and met with researchers from other institutions.

Dr. Pat Burnett attended the Association of American Geographers Conference in Seattle. She attended transportation related sessions, met with researchers from other institutions, and visited with Dr. J. Schneider, of the University of Washington's interactive computer facility, in regard to possible interactions between his group and Topic IIIB.

Dr. C. Shane Davies attended the conference on Developing Mass Transit Systems - Legal Aspects and Practical Considerations, in New York City. He attended a variety of sessions and met with researchers from other institutions. Dr. Davies presented a paper at the Environmental Design and Research Association meetings in Milwaukee.

Dr. William Dunlay attended the Dual Mode Conference in Washington and also was an observer at the UMTA program review session. Dr. Dunlay attended several sessions and met with a variety of other researchers. He also participated in the annual Federal Aviation Administration Review Conference in Washington, D.C. as well as attending meetings with representatives from the Dallas-Ft. Worth Airport and members of the North Central Texas Council of Governments.

Drs. Anthony Healey and Ronald Stearman, and Mr. Ed Nathman gave an invited paper at the Joint Automatic Control Conference in Austin. They also met with many researchers from other universities and held special sessions on ride quality problems. They also exhibited the facilities used for ride quality evaluation at the University.

Dr. W. Ronald Hudson visited the Netherlands to meet with the Dutch Government and Grontmij Engineers. He held several meetings and arranged for the development of a cooperative information exchange program. Dr. Hudson also visited with the Puebla Department of Public Roads, Puebla, Mexico, and the American University in Puebla, Mexico. Cooperative information exchange programs are being developed with them. Dr. Hudson also delivered a set of invited talks while there. Dr. Hudson attended the Conference on Management of Large-Scale Interdisciplinary Research programs in Los Angeles. He participated in several sessions. Dr. Hudson also visited South Africa to give a paper at an international conference and to hold several meetings on lowcost roads.

Dr. C. Michael Walton attended the Dual Mode conference in Washington, D.C. and also was an observer at the UMTA program review session. Dr. Walton attended several sessions and met with a variety of other university researchers. He also attended the American Society Civil Engineers conference in Montreal. Dr. Walton also presented a paper to the Texas Section of the American Society of Civil Engineers entitled, "The Effect of Intercity Transportation Systems on Small Urban Areas".

Mr. Charles Zlatkovich chaired a panel on The Census of Transportation at a conference on Economic Census Data Users sponsored by the Bureau of the Census and the Dallas Chamber of Commerce. Mr. Zlatkovich also spoke to the Houston, Texas Chapter of the American Society of Traffic and Transportation and the Ft. Worth, Texas Chapter of Delta Nu Alpha, transportation fraternity, on the subject of Intermodal Freight Transportation in the Southwest.

GUEST LECTURERS FOR TRANSPORTATION SEMINAR SERIES AND VISITORS TO THE COUNCIL

In order to provide a transportation forum for the students, faculty and the community, the Council sponsors a transportation seminar each semester which invites speakers from many facets of transportation. In addition to faculty and student presentations the seminar hosts national and international speakers from government, industry and other universities.

The Council's growing reputation in multidisciplinary transportation research has generated many vistors to the campus during the past year who have sought a broad range of interaction from transportation problems to an interest in management of multidisciplinary research activities.

The following is a list of seminar speakers and program visitors.

DATE	SPEAKE R	TOPIC
Sept. 17, 1973	Mr. Lyndon Henry, Executive Director, Texas Association for Public Transportation	"Cartrans: High Speed Transit for the Capital Area"
Sept. 24, 1973	Mr. Robert P. Neuschel, McKinsey and Co., Inc. Chicago, Illinois	"Factors Affecting the Establishment of a National Transportation Policy"
Nov. 12, 1973	Mr. Joe Ternus, Director of Urban Transportation Depart- ment, Austin, Texas	"The City of Austin's New Urban Transportation Depart- ment"
Nov. 26, 1973	Dr. Paul Roberts, Center for Transportation Study, Massa- chusetts Institute of Techno- logy	"Current Transportation Activities at Massachusetts Institute of Technology"
Dec. 10, 1973	Dr. Michael Moore, Texas Transportation Institute Texas A&M University	"Measurements"
January 28, 1974	Mr. K. Wester, Director Dutch Road Study Center	"First Hand Report on the Energy Crisis in Holland"
	Mr. P. Elsenaar, Chief, Instrumentation Lab	
	Mr. J. Brouwers, Chief Pavement Research	

DATE	SPEAKER	TOPIC
February 4, 1974	Mr. Robert P. Neuschel McKinsey and Company	"Air Transportation Industry's Profit Economics"
February 11, 1974	Mr. Roger Walker Computer Sciences UT Arlington	"The Use of Power Spectral Analysis in Predicting Pavement Serviceability"
March 25, 1974	Mr. Luther DeBerry State Highway Engineer	"The Changing Role of the Highway Department"
	Mr. Mark Goode Asst. State Highway Engi	neer

.

PROGRAM VISITORS

In addition to speakers, we have had a number of visitors to the Council from Universities, industry and government both from this country and foreign nations.

Arthur Mobley, Highway Research Board Ken Raithky, Transport and Road Research Lab Robert P. Neuschel, McKinsey and Company, Inc. James Hogan, Forest Service Paul O. Roberts, Center for Transportation Studies, MIT William M. Moore, Texas Transportation Institute, A&M University Jim Gathings, LTV Aerospace Corporation Kor Wester, Arnhem Holland Peter Elsenaar, Delft, Holland, State Road Lab Joop Brouwers, Delft, Holland, State Road Lab Antonio G. N. Novaes, School of Engineering, University of Sao Paulo Roger S. Walker, University of Texas at Arlington Aad T. Klomp, Shell Laboratories, Amsterdam, Holland Peter Van de Loo, Shell Laboratories, Amsterdam, Holland R. L. Carstens, C.E. Department, Iowa State University Howard Meeks, Industrial Engineering Department, Iowa State University K. A. Brewer, C.E. Department, Iowa State University M. L. Millett, Jr., Aerospace Engineering, Iowa State University R. O. Richards, Jr., Sociology Department, Iowa State University P. W. Peterson, Engineering Research Institute, Iowa State University Gene Goodson, Department of Transportation, Washington, D. C. Bill Brown, Department of Transportation, Washington, D.C. Kathy O'Leary, Department of Transportation, Washington, D. C. Richard Hannon, Department of Transportation, Washington, D. C. Joe P. Meck, Department of Transportation, Washington, D. C.

Ray Weil, Department of Transportation, Washington, D. C. Earnest Weisse, George Washington University Jim Shaw, University of California Steve James, TDCA Joe A. Mickie, Capital Area Planning Council Kelley Hamby, Governor's Office of Education Donald Harley, Governor's Office, Planning Coordination Gene Hansen, Forest Service, Ogden, Utah Larry Hendrickson, Division of Engineering, Forest Service Ronald Williamson, Division of Engineering, Forest Service Adrian Pelzner, Division of Engineering, Forest Service Lawrence Abernathy, Forest Service Louis A. Hepfl, Forest Service Sidney Nerdahl, Forest Service Edward Stuart III, Forest Service Ralph Fair, Forest Service Heyward Taylor, Forest Service Virgil L. Anderson, Statistics Department, Purdue University Leonard Stern, Forest Service Edward K. Marloh, University of Pennsylvania Norman Cooper, Office of the Secretary of Transportation, Washington, D. C. William F. Brown, OST, Department of Transportation Dr. Rudy Steck, Hanover University, Hanover, Germany John Staha, Governor's Office, State of Texas Olle Anderson, Swedish Road and Traffic Research Institute, Stockhom, Sweden Erling K. Hansen, Norwegian Road Research Laboratory, Norway Harro E. Van Der Most, Chairman of the committee and Director of the Laboratory of the Dutch Cement Industry George H. Kellersmann, Chief Engineer Public Works, Amsterdam, Holland Jan S. Sipkema, Director of Heijmans Inc. Jan J. M. Van Der Vring, Scientific Officer of Stichting Studie Centrum

Jan J. M. Van Der Vring, Scientific Officer of Stichting Studie Centrum Wegenbouw

ACADEMIC PROGRAMS IN TRANSPORTATION

Six schools and colleges of The University of Texas at Austin and a number of other divisions have on-going programs in transportation and in transportation-related fields. Some of these programs have been in existence for many years and have historically cooperated with each other in various research projects. In addition, multidisciplinary graduate programs in transportation have been available in some of the present graduate degree structures for a nu er of years.

The academic programs currently available provide all of the elements necessary for the rapid synthesis of truly multidisciplinary formal graduate degree programs in transportation. The Academic Division of the Council for Advanced Transportation Studies is charged with the task of working out the details for formalizing these programs.

The present curricula provide a firm foundation for the development of multidisciplinary transportation programs and the present faculty have much experience in the teaching of transportation and transportation-related courses.

To help develop this coordinated program in transportation studies, the Council prepared a brochure entitled "Academic Programs in Transportation." This brochure lists over 90 courses which are directly or indirectly related to transportation, and which are currently offered on the U.T. campus.

The Council has also offered two University-wide transportation seminars. One is an undergraduate course intended to provide the student with an overview of transportation problems and phenomena. The second course is a graduate seminar and covers a wide range of transportation policy issues.

PERSONNEL INVOLVEMENT IN CATS-DORT

FACULTY

Faculty involvement in the Council of Advanced Transportation Studies and Division of Research during the past year has been as follows:

W. R. Hudson, Civil Engineering, Director of Division of Research in Transportation, DORT Budget Advisory Committee (Chairman), CATS Executive Committee (ex officio),

Lymon C. Reese, Civil Engineering, CATS Executive Committee (Chairman), DORT Budget Advisory Committee (ex officio),

- Alexander Clark, Acting Dean, LBJ School of Public Affairs, CATS Executive Committee
- Wayne Danielson, Dean of School of Communications, CATS Executive Committee,
- Earnest F. Gloyna, Dean of College of Engineering, CATS Executive Committee,

Page Keeton, Dean of Law School, CATS Executive Committee

- George Kozmetsky, Dean of College of Business Administration, CATS Executive Committee,
- J. W. McKie, Dean of College of Social and Behavioral Sciences, CATS Executive Committee
- James R. Roach, Dean of Division of General and Comparative Studies, CATS Executive Committee,
- Stanley Werbow, Dean of College of Humanities, CATS Executive Committee, Charles Burnett, Dean of School of Architecture, CATS Executive Committee, Paul Olum, Dean of College of Natural Sciences, CATS Executive Committee, C. Shane Davies, Geography, Corresponding Principal Investigator, DORT
- Budget Advisory Committee, DOT Operating Committee,
- Stanley Arbingast, Bureau of Business Research, DORT Budget Advisory Committee, Corresponding Principal Investigator, DOT Operating Committee,
- Hudson Matlock, Chairman, Civil Engineering, DORT Budget Advisory Committee, Richard Dodge, Architecture, DORT Budget Advisory Committee (ex officio),
- Corresponding Principal Investigator, DOT Operating Committee, Ronald Briggs, Geography, Corresponding Principal Investigator, DOT Operating Committee,
- Anthony Healey, Mechanical Engineering, Corresponding Principal Investigator, DOT Operating Committee,
- Paul Jensen, Mechanical Engineering, Principal Investigator,
- James Fitzsimmons, Management, Principal Investigator,
- Charlotte Clarke, Social Work, Principal Investigator,
- Henry Steiner, Management, Principal Investigator,
- Michael Walton, Civil Engineering, Principal Investigator, CATS Executive Secretary, DOT Operating Committee
- William Dunlay, Civil Engineering, Corresponding Principal Investigator, DOT Operating Committee
- Patricia Burnett, Geography, Principal Investigator, DOT Operating Committee

C. Craig Smith, Mechanical Engineering, Principal Investigator, Alfred Smith, School of Communications, Director Communications Research Center, Principal Investigator, Hampton Snell, Management, Principal Investigator, Robert Means, Law, Principal Investigator, Ronald Stearman, Aerospace Engineering, Principal Investigator, Larry Hoberock, Mechanical Engineering, Principal Investigator, Mark Alpert, Marketing, Principal Investigator, Stan Burnham, Regional Medical Program, Faculty Associate, Kingley Haynes, Lyndon B. Johnson School of Public Affairs, Faculty Associate, Tom Kennedy, Civil Engineering, DOT Operating Committee, Faculty Associate, Dudley Poston, Sociology, Faculty Associate, Sandra Rosenbloom, Community and Regional Planning, Faculty Associate, Elmer Hixon, Electrical Engineering, Principal Investigator, Franklin McCullough, Civil Engineering, Principal Investigator, Baxter Womack, Electrical Engineering, Faculty Associate, Gene Burd, Journalism, Faculty Associate, James Holmes, Engineering Graphics, Faculty Associate, George R. Blitch, Office of Research Management, Charles P. Zlatkovich, Bureau of Business Research, Robert Lockwood, Bureau of Business Research. Florence Escott, Bureau of Business Research, Edward L. Frome, General Business, Principal Investigator, James M. Treece, Law, Principal Investigator, Robert G. Mather, Architecture, Principal Investigator, John H. Vanston, Mechanical Engineering, Associate Director Center for Energy Studies, Faculty Associate, Tom Hill, Associate Director for Operations, Center for Energy Studies, Faculty Associate, Hal Cooper, Civil Engineering, Environmental Health Engineering Laboratories, Principal Investigator, Albert Shapero, Management, Faculty Associate, Clyde Lee, Civil Engineering, Director, of Center for Highway Research, Faculty Associate, James E. Hartling, Community and Regional Planning, Faculty Associate, Kenneth H. Jehn, Meteorology, Faculty Associate, Charles C. Cleland, Special Education and Educational Psychology, Faculty Associate, Barbara J. Chance, Sociology, Faculty Associate, Richard L. Schott, Government, Faculty Associate, Charles M. Bonjean, Sociology, Faculty Associate, Sheldon R. Olson, Sociology, Faculty Associate, D. M. Huffman, Management, Faculty Associate, Herbert H. Woodson, Electrical Engineering, Director, Center for Energy Studies, Milton E. Schoeman, Management, Faculty Associate, Niles M. Hansen, Economics, Director, Center for Economic Development, Faculty Associate,

John Gallery, Architecture, Associate Dean, Faculty Associate, Jay Nematollahi, Pharmaceutical Chemistry, Faculty Associate, Peter R. Antoniewicz, Physics, Faculty Associate, C. D. Zinn, Mechanical Engineering, Faculty Associate, Richard Furlong, Civil Engineering, Faculty Associate, William G. Lesso, Mechanical Engineering, Faculty Associate, Robin Doughty, Geography, Faculty Associate, Carl E. Hansen, Special Education, Faculty Associate,

GRADUATE STUDENTS

A major area of comcern of the Council is the development of graduate students who will enter the work force with skills to assist in the solution of transportation problems in their various fields of endeavor. During the past year,forty-eight graduate students worked for the Council. The following is a list of students who are continuing research and education from FY 73-74 and those who have completed degree programs.

Gary Michael Alletag, B.B.A., Topic V, Law Nancy Jean Bauer (miniproposal), B.A., Community and Regional Planning Nan Standish Blake (miniproposal), M.F.A., Photography Kevin Thomas Bowman (Topic I) B.A., Geography Mallory J. Campbell, B.S., Topic V, Marketing Chang-Yi David Chang, M.A., Topic III B, Geography Bruce Robert Coulombe, B.S., Topic III A, Law Gordon Derr, B.S.C.E., DOT Topic II, Civil Engineering S. Michael Dildine, B.S., DOT Topic III A, Business Administration William D. Driscoll, M.S., Topic I, Mechanical Engineering Wayne T. Enders, M.A., DOT Topic I, Geography Noel Engemoen, B.S., Topic V, Business Anthony K. Gregory, B.A., Topic II, Architecture William K. Groll, B. A., Topic III B Lyndon Henry, B. S., DOT Topic III B, Community and Regional Planning Enrique Cano Jiminez, B.S., Forest Service, Civil Engineering Edward N. Kasparik, B.A., Topic III A, Community and Regional Planning Joanne DeFrank Koegel, M.C.R.P., Topic III B, Geography Japhet S. Law, B.S., Topic I, Mechanical Engineering William A. Leonard, IV, B.A., Topic I, Geography David McGehee, B.S., DOT Topic Iv, Mechanical Engineering Jose de Jesus Montemayor, M.A., Topic II, Electrical Engineering Nazim S. Nathoo, B.S., M.S., DOT Topic IV, Mechanical Engineering Ricardo Nicolau del Roure, M.S., Civil Engineering William F. Perrin, B.B.A., Topic I, Business Patricia Ellen Ragle, (miniproposal), B.S., English

- Shirley Selz, B.A., Forest Service, Law
- John P. Sparks, B.A., Topic III B, Community and Regional Planning
- Beverly Spikes, B.B.A., Topic V, Marketing
- David Stamman, M.A., Topic IV, Psychology
- Michael Lee Stewart, M.A., Topic IV, Psychology
- Hugh J. Williamson, M.A., Topic IV, Mathematics

Charles P. Zlatkovich, M.B.A., Topic III A, Business-Transportation

The following graduate students have completed degree programs while working for the Council for Advanced Transportation Studies. These students are now employed in industry and government.

- William D. Driscoll, Ph.D. Mechanical Engineering, University of Texas, Department of Mechanical Engineering
- David Brown, MBA Business Administration, Exxon Corporation, Baytown, Texas
- Ronald Matthews, MBA Business Administration, Arthur Anderson Consultants
- Frank Schleicher, MBA Business Administration, Fluor Corporation, Los Angelos, California
- Harry Wolfe, MA, Geography, seeking a job in planning
- Terry Watson, MSCE, Civil Engineering, Transportation Planner, Texas Highway Department District Office, Dallas, Texas
- Lidvard Skorpa, MSCE, Civil Engineering, Transportation Planner for the National Highway Administration, Oslo, Norway
- Jim Wilson, MBA '74, Business Administration, Assistant-to-the-Vice President for Business Affairs, Shuttle Bus Operations, The University of Texas at Austin
- David Venhuizen, MSCE '74, Governor's Office for Planning and Coordination, Austin, Texas
- Barry Chasnoff, J.D. Attorney for the Department of Transportation, Washington, D. C.
- Tom McGarragh, MSCE, Civil Engineering, Engineer, Exxon Oil, California
- Roger Kester, MA, Geography, Transportation Planner, Missouri State Highway Department, Jefferson City, Mo.
- Graham Hunter, MA, Architecture, Private Architecture firm in Connecticutt
- Bruce Shanahan, MSME, Mechanical Engineering, McDonell Douglas Aircraft, California
- Edward Nathman MSAE, Aerospace Engineering, Engineer, Bell Helicopter, Fort Worth, Texas

ADMINISTRATIVE STAFF

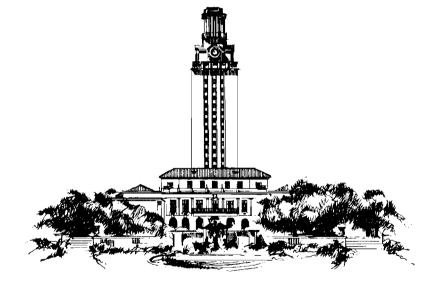

The major research efforts of the faculty and graduate students of the Council are also supported by part-time and a small number of full-time administrative staff. A significant number of the staff personnel is derived from the undergraduate student body. This employment provides opportunities for financial assistance to education in many disciplines of the university.

Susan P. Barry, Secretary Jenny Lou (Appleton) Batson, Senior Secretary, Topic II Franklin C. Bergman, Social Science Research Associate III Jennifer B. Brewster, Topic III A Frances DeLaCruz Bricano, Senior Clerk Typist, Topic III A Kristin M. Brown, Laboratory Research Assitant II James Robert Buchanan, Topic III A Kathryn Elizabeth Burger, Topic III A Joan Carol (Bates) Cantu, Draftsperson I Patricia Cole, Topic V Patrick G. Collins, Topic V Anita Emily Cox, Topic V Diane Elizabeth Fischer, Senior Secretary, Topics II and III B Rebecca Gonzalez, Senior Secretary Paul Warren Green, Topic III A Nancy Jo(Haenel) Watson, Senior Clerk Typist Robert Haller, Topic V Karen Haynes, Social Science Research Associate IV, Topic I William L. Hezlep, Topic III A John Huddleston, Social Science Research Associate II, Topic II Kathryn Jost, Topic V Robert M. Lockwood, Topic III A Christine L. McCullough, Topic III A Sharlene Neibauer, Topic V

Linda Lucille (Skinner) Pethia, Administrative Secretary Donna Prestwood, Topic V Dianne Young Priddy, BBA, Topic III A, Business Administration Patricia Marie (Davis) Rein, Secretary Daniel P. Rosas, Topic III A Janette Marie (Points) Scott, Senior Secretary, Topic I Georgia Seitz, Topic V Janice Sherwood, Draftsperson Marilyn Celeste Turnbill, Topic III A Charles E. Watkins, Ph.D., Research Associate Patricia Ann (Banks) Williams, Senior Secretary Gary Joe Wolfe, Research Associate
